

**Objectivity: An Introduction**

Students demonstrate an understanding of engineering problem-solving techniques simply from the knowledge already provided by learning the principles of thermodynamics. The key to understanding the introduction of design is to present the primary responsibility of an engineer. The typical engineering culture is to design, and design is the process of the synthesis that creates a new path, solution, or method that provides a solution to a problem or fulfills a need. The student is required to make a new design, and it is important that it is a new design. Students are required to then demonstrate what is possible, design an interdisciplinary engineering project and demonstrate the process, show the understanding of the engineering solution, and explain what is the design for a new solution. The student is required to design a design in the light of the problem and the solution, and the solution is the solution.

The student is required to demonstrate the design process, and the student is required to demonstrate the design process, and the student is required to demonstrate the design process.
