The Architect's Eye Deborah Nevins, Robert A. M. Stern, 1979-01-01 *American Architects and the Mechanics of Fame* Roxanne Kuter Williamson, 2011-03-01 Why does one talented individual win lasting recognition in a particular field while another equally talented person does not? While there are many possible reasons, one obvious answer is that something more than talent is requisite to produce fame. The something more in the field of architecture asserts Roxanne Williamson is the association with a famous architect at the moment he or she first receives major publicity or designs the building for which he or she will eventually be celebrated. In this study of more than six hundred American architects who have achieved a place in architectural histories, Williamson finds that only a small minority do not fit the right person-right time pattern. She traces the apprenticeship connection in case studies of Louis Sullivan, Frank Lloyd Wright, Henry Hobson Richardson, the firm of McKim, Mead, White, Latrobe, and his descendants, the Bulfinch and Renwick Lines, the European immigrant masters, and Louis Kahn. Although she acknowledges and discusses the importance of family connections, the right schools, self-promotion, scholarships, design competition awards, and promotion by important journals, Williamson maintains that the apprenticeship connection is the single most important predictor of architectural fame. She offers the intriguing hypothesis that what is transferred in the relationship is not a particular style or approach, but rather the courage and self-confidence to be true to one's own vision. Perhaps she says this is the case in all the arts. *American Architects and the Mechanics of Fame* is sure to provoke thought and comment in architecture and other creative fields.

Houses from Books Daniel D. Reiff, 2010-11-01
Many homes across America have designs based on plans taken from pattern books or mail order catalogs. In *Houses from Books*, Daniel D. Reiff traces the history of published plans and offers the first comprehensive survey of their influence on the structure and the style of American houses from 1738 to 1950. *Houses from Books* shows that architectural publications from Palladio's *I Quattro Libri* to Aladdin's *Ready Cut Homes* played a decisive role in every aspect of American domestic building. Reiff discusses the people and the firms who produced the books as well as the ways in which builders and architects adapted the designs in communities throughout the country. His book also offers a wide ranging analysis of the economic and social conditions shaping American building practices. As architectural publication developed and grew more sophisticated, it played an increasingly prominent part in the design and the construction of domestic buildings. In villages and small towns which often did not have professional architects, the publications became basic resources for carpenters and builders at all levels of expertise. Through the use of published designs, they were able to choose among a variety of plans, styles, and individual motifs and engage in a fruitful dialogue with past and present architects. *Houses from Books* reconstructs this dialogue by examining the links between the published designs and the houses themselves. Reiff's book will be indispensable to architectural historians, architects, preservationists, and regional historians. Realtors and homeowners will also find it of great interest. A catalog at the end of the book can function as a guide for those attempting to locate a model and a date for a

particular design Houses from Books contains a wealth of photographs many by the author that enhance its importance as a history and guide **Drawn to Design** Eric Jenkins,2022-04-19 The book is a guide for students and teachers to understand the need for the role of and the methods and techniques of freehand analytical sketching in architecture The presentation focuses on drawing as an approach to and phase of architectural design The conceptual goal of this approach is to use drawing not as illustration or depiction but as exploration The first part of the book discusses underlying concepts of freehand sketching in design education and practice as a complement to digital technologies The main component is a series of chapters that constitute a typology of fundamental issues in architecture and urban design for instance issues of facade are illustrated with sketch diagrams that show how facades can be explored and sketched through a series of specific questions and step by step procedures In the expanded and updated edition a new part explores the questions and experiences of large architectural offices in applying freehand drawing in the practice of architectural design This book is especially timely in an age in which the false conflict between traditional vs digital gives way to multiple design tools including sketching It fosters understanding of the essential human ability to investigate the designed and the natural world through freehand drawing

The American Architectural Drawing Carole Cable,1982 **Pietro Belluschi** Meredith L. Clausen,1994 Meredith Clausen reveals the enormous power that Belluschi wielded as an arbiter of taste and decision maker in the 1950s and 1960s his role in shaping the policy of the State Department in its overseas building program and his role in securing major commissions for favored architects such as I M Pei Equally important is Clausen's discussion of Belluschi's role in the development of regionalism in the Pacific Northwest and its impact on the definition of modernism as it was emerging in the United States
