The Architecture Of Loss:

The Architecture of Loss Julia Cho, 2005 THE STORY It's another hot day in Tucson when a strange man arrives at Catherine's door. To her shock, he turns out to be Greg, her former husband, who sixteen years earlier and for no clear reason left and simply never came back. Now he has returned.

The Emerald City and Other Essays on the Architectural Imagination Daniel Willis, 1999 In *The Emerald City* Dan Willis takes us on a flight of imagination that paradoxically never strays far from the most tangible even intimate subjects. His essays range from the Tower of Babel to the Wizard of Oz, from Christ to Christmas trees, from the lightness of being to the weight of architecture. This ultimately optimistic book suggests that architecture is as vital as ever. It is tempting to say that our present cultural situation has rendered architecture nearly impossible, if not unnecessary. But it is also possible to look to what our lives at the turn of the millennium typically lack: fulfillment, spirituality, a sense of belonging, weight, and to conclude that the ground for architecture has never been more fertile. The texts intelligent and readable draw equally from literary sources, architectural practice, philosophical analyses, pop culture, and everyday experiences. Willis's perspective as a writer, architect, artist, and teacher informs his work; his texts are at once reflective and proactive as they challenge readers to rethink their participation in the built environment. Accompanying the text are the author's original illustrations which link the forms and forces surrounding architecture at the end of the twentieth century in novel, thought-provoking ways.

The Architect, 1889 **From Animals to Robots and Back: Reflections on Hard Problems in the Study of Cognition** Jeremy L. Wyatt, Dean D. Petters, David C. Hogg, 2014-07-10 Cognitive Science is a discipline that brings together research in natural and artificial systems, and this is clearly reflected in the diverse contributions to *From Animals to Robots and Back*. In tribute to Aaron Sloman and his pioneering work in Cognitive Science and Artificial Intelligence, the editors have collected a unique collection of cross-disciplinary papers that include work on intelligent robotics, philosophy of cognitive science, emotional research, computational vision, comparative psychology, and human-computer interaction. Key themes such as the importance of taking an architectural view in approaching cognition run through the text. Drawing on the expertise of leading international researchers, contemporary debates in the study of natural and artificial cognition are addressed from complementary and contrasting perspectives, with key issues being outlined at various levels of abstraction. *From Animals to Robots and Back* will give readers with backgrounds in the study of both natural and artificial cognition an important window on the state of the art in cognitive systems research.
