

## CABLE MODEM/ROUTER WITH WIRELESS & QUICK START

The Linksys Cable Modem/Router with Wireless is a cable modem device as well as a wireless router. It connects cable modems and routers to a wireless network. It also provides a gateway, allowing connection to external devices, like the Internet or your PC.

### Package Contents

- Linksys Cable Modem/Router with Wireless
- Power cord
- Ethernet RJ-45 cable
- CD with User Manual

### Before Installing Your Cable Modem

Before you can begin using your Linksys Cable Modem, you must assign a static IP address to your computer. This will ensure that you can always connect to your cable modem, even if your Internet Service Provider (ISP) changes your IP address. You can also use this static IP address to access your cable modem's control panel and monitor its performance as you use the various features of the cable modem.

### System Requirements

- You must connect the cable modem to a computer running that uses one of the following Windows® versions: 98, 2000, ME, or XP. If you want to use another operating system, please speak with your cable service provider.
- Please see Quick Start for more information, or visit our website.

If you plan to use a wireless provider to cable modem router to access your cable modem, you must have a computer that can use a wireless connection. You must also purchase a wireless adapter card for your computer. Please refer to the "How to Connect Your Computer to the Router" section for more information.

If your cable service provider provided a cable modem adapter kit (from cable service provider) with your cable modem, it may not be compatible with your computer. You must obtain a cable modem adapter kit from your cable service provider. If you do not have a cable modem adapter kit, you must purchase one. You can purchase a cable modem adapter kit from your local computer store or online. Please refer to the "How to Connect Your Computer to the Router" section for more information.

You will need to plug in the cable modem's power and connection to your cable service provider. You must also connect the cable modem to the computer. You must also connect the cable modem to the Internet.

After you have connected your cable modem and have completed all of the steps above, you can begin to configure your computer to the Internet. Please follow the steps below to begin the configuration process. You'll notice that the first few steps apply to both the Quick Start and the Router's Wireless Connection.

After you plug in the hardware connection, you must connect to the Internet. You must also connect your cable modem and have completed all of the steps above, you can begin to configure your computer to the Internet.

If you want to connect to a computer running that uses one of the following, please refer to the "How to Connect Your Computer to the Router" section for more information.

- If you want to connect to a computer running that uses one of the following, please refer to the "How to Connect Your Computer to the Router" section for more information.

- You want to connect your computer using the Linksys Cable Modem's Ethernet port, please refer to the "How to Connect Your Computer to the Router" section for more information.
- You want to configure advanced options, please refer to the User Manual on the CD.

### How to Connect to a Computer If You Don't Have an Ethernet Port on Your Router

- The only port available is port 1 and the port number is highlighted. Please enter the IP address assigned to this port in the "IP Address" field of the connection screen and the following steps.
- Enter the port of the second port in the "IP Address" field of the connection screen and the second port in the Router connection for the second of the two ports. Then, click "Save" to save the configuration.

- You must connect a crossover cable between an available port and port 1 of the cable modem. Please note that you can use a standard crossover cable.
- Physically, there must already be a crossover cable or jumper wires and Ethernet cables connected to the cable modem.
- Plug the power adapter for the Router into the back panel of the cable modem and power it on. You can then log in on "Device 2" in the "Wireless" screen.

- For security, it is recommended that you connect the second Ethernet cable to an available Ethernet port (port 1, 2, 3, 4, 5, or 6) on the back panel of the cable modem and connect the cable to the Ethernet port of your computer. If you are using your computer's built-in wireless card, please connect the second Ethernet cable to the "Wireless" screen on "Device 2" in the "Wireless" screen.
- Wait until the second port is active (as the first port becomes the main modem port and switch to the secondary port for communication). If you are using a 56K, 64K, or 128K Broadband Cable Adapter, wait for the light to stay steady green to signal success.

Once you have waited and go to a browser that has Internet, then the connection is made.

- From your computer, connect to the cable modem's address to access the Router's Wireless Connection.
- You want to configure advanced options, please refer to the "How to Connect Your Computer to the Router" section for more information.
- You want to configure advanced options, please refer to the User Manual on the CD.

### Powering the Router

- Connect the power adapter to the cable modem's power port.
- Connect the power adapter to a power outlet.
- Connect the power adapter to a power outlet.

### Hardware Connection

Port 1 of the Router is connected to the cable modem.

Port	Description
Port 1	For cable and DSL connections to your Internet Service Provider or your cable provider. Connect a cable from the cable provider to this port.
Port 2	The 10/100Mbps Ethernet port. Use this port to connect to a computer, hub, or router to these ports.
Port 3	The 10/100Mbps Ethernet port. Use this port to connect to a computer, hub, or router to these ports.
Port 4	The 10/100Mbps Ethernet port. Use this port to connect to a computer, hub, or router to these ports.
Port 5	The 10/100Mbps Ethernet port. Use this port to connect to a computer, hub, or router to these ports.
Port 6	The 10/100Mbps Ethernet port. Use this port to connect to a computer, hub, or router to these ports.

### Connecting the Cable Modem/Router Wireless to Home Device

The cable modem/router has a port for 802.11b-compatible connections to your computer and other devices. You can use these ports to connect to your computer and other devices, or you can also change port 1.

The main connection ports necessary that support 802.11b using 802.11b are as follows: Wireless (Wireless 1) 802.11b (Device Port 1) is the first port of the Router. This port supports 802.11b (Device Port 2) 802.11b (Device Port 3) 802.11b (Device Port 4) 802.11b (Device Port 5) 802.11b (Device Port 6) 802.11b (Device Port 7) 802.11b (Device Port 8) 802.11b
