The Physicists And God:

The Physicists and God A. van den Beukel, 1995 In this book Anthony Van den Buekel faces the question of whether physics and religion are compatible His answer is as sincere as it is convincing The book is worth reading just for the mere fact that it explains the new physics in simple language *The Faith of a Physicist* John C. Polkinghorne, 2014-07-14 Is it possible to think like a scientist and yet have the faith of a Christian Although many Westerners might say no there are also many critically minded individuals who entertain what John Polkinghorne calls a wistful wariness toward religion they feel unable to accept religion on rational grounds yet cannot dismiss it completely Polkinghorne both a particle physicist and Anglican priest here explores just what rational grounds there could be for Christian beliefs maintaining that the quest for motivated understanding is a concern shared by scientists and religious thinkers alike Anyone who assumes that religion is based on unquestioning certainties or that it need not take into account empirical knowledge will be challenged by Polkinghorne's bottom up examination of Christian beliefs about events ranging from creation to the resurrection The author organizes his inquiry around the Nicene Creed an early statement that continues to summarize Christian beliefs He applies to each of its tenets the question What is the evidence that makes you think this might be true The evidence Polkinghorne weighs includes the Hebrew and Christian scriptures their historical contexts and the possible motivations for their having been written scientific theories and human self consciousness as revealed in literary philosophical and psychological works He begins with the words We believe and presents understandings of the nature of humanity showing for example that Cartesian theory evolution and natural selection do not tell the entire story of what humans are about especially in light of many sources that attest to our spirituality Moving through the Creed Polkinghorne considers the concept of divinity and God as creator in discussions that cover the Theory of Everything the Big Bang Theory and the possibility of divine presence within reality so that God is not simply an outside observer Chapters on Jesus analyze the different ways events are described in the Gospels and the way motivation for belief is conveyed for example how do these writings explain why a young man killed in public disgrace could inspire a following when other major world religious leaders lived to become highly revered elders in their communities Faith seeking understanding is according to Polkinghorne like the scientific quest Both are journeys of intellectual discovery in which those who survey experience from an initially chosen point of view must be open to correction in the light of further experience Religion he writes has long known that ultimately every human image of God proves to be an inadequate idol The Faith of a Physicist based on the prestigious 1993 Gifford Lectures delivers a powerful message to scientists and theologians theists and atheists alike Originally published in 1994 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to

the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

The Physics of God and the Quantum Gravity Theory of Everything James Redford, 2011-12-19 ABSTRACT Analysis is given of the Omega Point cosmology an extensively peer reviewed proof i e mathematical theorem published in leading physics journals by professor of physics and mathematics Frank J Tipler which demonstrates that in order for the known laws of physics to be mutually consistent the universe must diverge to infinite computational power as it collapses into a final cosmological singularity termed the Omega Point The theorem is an intrinsic component of the Feynman DeWitt Weinberg quantum gravity Standard Model Theory of Everything TOE describing and unifying all the forces in physics of which itself is also required by the known physical laws With infinite computational resources the dead can be resurrected never to die again via perfect computer emulation of the multiverse from its start at the Big Bang Miracles are also physically allowed via electroweak quantum tunneling controlled by the Omega Point cosmological singularity The Omega Point is a different aspect of the Big Bang cosmological singularity the first cause and the Omega Point has all the haecceities claimed for God in the traditional religions From this analysis conclusions are drawn regarding the social ethical economic and political implications of the Omega Point cosmology
