Improvement Of Myocardial Perfusion:

Improvement of Myocardial Perfusion J. Meyer, R. Erbel, H.J. Rupprecht, 2012-12-06 This book contains the manuscripts of the majority of the papers given during the symposium Improvement of Myocardial Perfusion which was held from September 27-29 1984 in Mainz Germany It has been the purpose of this meeting to focus the interest of scientifically and clinically interested cardiologists on the new developments in this field We therefore chose the subtitle Medical Mechanical Surgical Approach The medical improvements in myocardial perfusion have been brought about by the application of streptokinase urokinase and tissue type plasminogen activator in the first hours after the onset of an acute myocardial infarction The different modes of application and the possibilities to evaluate and eventually to quantify the results of these treatments were addressed during the first part of the meeting The mechanical way to improve perfusion nowadays mainly consists of the application of intracoronary balloon angioplasty Although since 1977 the treatment has become a routine method several questions are still open such as the exact mode of action the reaction of the vessel wall the optimal pressure and balloon size as well as the long term results and the prevention of restenosis *The Cleveland Clinic Cardiology Board Review* Brian P. Griffin, Curtis M. Rimmerman, Eric J. Topol, 2006-11-01 The Cleveland Clinic Cardiology Board Review offers thorough preparation for board certification and recertification exams in cardiology It is written by distinguished clinicians from the Cleveland Clinic Foundation's Department of Cardiovascular Medicine and based on the Cleveland Clinic Foundation's popular annual Intensive Review of Cardiology course In 62 chapters the book provides a comprehensive state of the art review of every area of contemporary cardiovascular medicine Emphasis is on board relevant clinical material and accurate real world clinical decision making More than 400 illustrations and numerous tables facilitate quick review Board format questions with answers and explanations appear at the end of each section *Coronary Vasculature* Robert J. Tomanek, 2012-10-19 Ischemic heart disease is the leading cause of morbidity and mortality in the developed world The high metabolism and oxygen demand of the cardiac myocardium depends on both a high blood flow and a rich capillary density For this reason the growth of the coronary vasculature is vital not only in early development but also in the adult faced with various stresses Novel technologies have enabled the discovery of the molecular mechanisms underlying the growth and assembly coronary vessels and this volume covers the hierarchy of the coronary vasculature from its embryonic origins through its postnatal growth adulthood and senescence Chapters address normal coronary development coronary anomalies and their possible underlying developmental errors coronary vessel adaptations to exercise training aging hypoxia myocardial ischemia and cardiac hypertrophy This comprehensive overview of current research in coronary vessels and myocardial perfusion was written by Dr Robert J Tomanek Emeritus Professor of Anatomy and Cell Biology at the University of Iowa The book reviews discusses and integrates findings from various areas of coronary vasculature research and as a result will be a valuable reference source for cardiovascular scientists and physicians for many

Myocardial Perfusion Imaging (MPI) Fadi Gabriel Hage,2018 Myocardial perfusion imaging MPI is the most commonly used non invasive stress imaging test for the diagnosis and risk stratification of coronary artery disease Although MPI has been around for decades recent advances have made possible fundamental changes in the performance of this test While exercise is the preferred modality of stress with MPI pharmacologic stress testing can be used when exercise is not an option due to contra indications or when patients are unable to achieve an adequate level of exercise MPI provides a wealth of diagnostic and prognostic data encompassing both perfusion and non perfusion variables that can guide patient management The non perfusion data include exercise variables hemodynamic response to exercise or pharmacologic stress electrocardiographic changes and left ventricular dyssynchrony The test is widely used for risk stratification in patients with suspected or known to have coronary disease but has also found special applications in evaluation prior to kidney or liver transplantation While stress testing whether with exercise or pharmacologic stress it is relatively important to be cognizant of adverse effects that can be encountered in the stress laboratory especially in high risk and special populations and to have plans to manage these appropriately There has been increasing emphasis on the ionizing radiation exposure to patients from medical diagnostic imaging including MPI It is therefore essential to be aware of novel protocols that can be implemented in day to day practice to reduce radiation exposure to patients and staff without adversely affecting the diagnostic quality of the studies
