**Bulletin**, 1940 **Bioindustrial Ecosystems** D. J. A. Cole, George C. Brander, 1986 This book comprises a series of individual papers on the development of intensive methods of rearing animals. Starting from the original domestication of what are known as farm animals the authors consider the effect on the ecosystem of the new method of housing animals the changes in animal types as a remit of selective breeding and the new programmes for the effective feeding of animals. In addition the effect of intensive management on animal behaviour and disease incidence is discussed for poultry pigs and cattle. The consideration of bioindustrial ecosystems in this volume concentrates on systems which while being true ecosystems differ considerably from those dealt with in the other volumes of this series. The points of similarity concern the relationship between one organism and another and their interaction with the environment. The points of difference relate to the major role of man as an organism in bioindustrial ecosystems and the nature of the artificial environment that he has created for his animals. The involvement of man is related to the domestication of animals and his use of them for such things as food traction transport clothing fertiliser and recreation. Man's use of animals in different parts of the world varies considerably and is influenced by a number of factors which include climate wealth availability of water customs and religion. Probably the developments in bioindustry during this century show a greater change in an ecosystem over a short time than any other. As man further develops bioindustry to meet his needs so the place of the animal in the ecosystem assumes greater importance in relation to its own well being. Using an international approach the authors have compiled a comprehensive study which will act as an important reference for political and ecological discussions on the future of animal production.

Eddy, 2008-04-15 Bovine Medicine provides practical and comprehensive information on cattle disease and production and is a key reference for all large animal vets. Since the first edition was published in 1991 there have been significant improvements in disease control and management of cattle. Almost all parts of the book have been updated and completely rewritten. There are new chapters on surgery, embryo transfer, artificial insemination, ethno-veterinary medicine and biosecurity and a new consolidating chapter on the interaction between the animal, environment, management and disease. The previous edition has sold all over the world and as a result of this a greater

emphasis has been placed on conditions and their treatment in areas other than temperate regions. A new section entitled 'Global Variation in Cattle Practice' has been included with contributors discussing bovine medicine practice in their part of the world. All in all this is an outstanding resource for any practising vet and an excellent reference for veterinary students.
