

RESEARCH IN MATHEMATICAL BIOLOGY

- Identify unresolved biological question: typically I study questions related to cancer growth and treatment
- Understand the biology well enough to develop a *mathematical model* of the biological problem
- Compare model predictions to biological data
- Re-work model until it well-describes biological data
- Use model to seek answers to unresolved biological question

Some Mathematical Questions in Biology American Mathematical Society, 1970-12-31 Discusses biological clocks plus topics in ecology neurobiology and extinction *Some Mathematical Questions in Biology* Simon A. Levin, 1974-12-31 Covers topics in evolutionary biology the development of pattern and color perception *Some Mathematical Questions in Biology, Neurobiology* Robert M. Miura, 1982-12-31 This volume contains lectures presented at the 15th annual meeting on mathematical biology organized by a joint AMS SIAM committee as part of the mathematical activities at the annual AAAS meeting held January 7 1982 in Washington D C The meeting was devoted to neurobiology and was very ably organized by Robert M Miura Neurobiology is a very large field and there are many applications of mathematics that could have been selected Miura and the committee wisely chose to concentrate on one or two topics concerned mainly with the properties of individual neurons and their processes In summary this is an excellent collection of articles on some of the more interesting and timely problems of cellular neurobiology The articles especially those by Plant Rinzel and Nicholson and Phillips are all excellent expositions of important problems I recommend this volume to anyone interested in mathematical neurobiology

Some Mathematical Questions in Biology Louis J. Gross, Robert M. Miura, 1986-12-31 Distinguishing itself among other books on mathematics in plant biology this book is unique in that it presents a broad overview of how plant biologists are currently utilizing mathematics in their research and the only one to particularly emphasize plant ecology Each article is unified by an attempt to tie models at one level of organization to an understanding at other levels This approach strengthens the connections between theoretical development and observable biology facilitating the testing of new predictions Intended for mathematicians plant biologists and ecologists alike this book requires only a basic knowledge of differential equations linear algebra and mathematical modeling a knowledge of plant biology is helpful Readers will gain a perspective on what types of biological systems can benefit from mathematical treatment and an appreciation of the current important problems in plant biology

Some Mathematical Questions in Biology--sex Allocation and Sex Change Marc Mangel, 1990-10-26 The seven articles in this volume are based on lectures presented at the annual symposium *Some Mathematical Questions in Biology* held in conjunction with the American Institute of Biological Sciences meeting in Toronto Ontario in August 1989 Sexual selection sex determination and sex allocation have been at the center of evolutionary ecology since its inception and have played an important role in the development of many concepts As this volume demonstrates many key questions remain to be investigated through a combination of empirical and theoretical work In addition questions of sex provide a natural mechanism for crossing the great taxonomic divide by allowing plant and animal researchers to focus on similar kinds of questions using a wide variety of organisms *Some Mathematical Questions in Biology* Simon A. Mathematical Problems in Biology P. van den Driessche, 2013-03-08 A conference on Some Mathematical Problems in Biology was held at the University of Victoria Victoria B C Canada from May 7 10 1973 The participants and invited speakers were mathematicians interested in problems of a biological nature and scientists actively engaged in developing mathematical models in biological fields One aim of the conference was to attempt to assess what the recent rapid growth of mathematical interaction with the biosciences has accomplished and may accomplish in the near future The conference also aimed to expose the problems of communication between mathematicians and biological scientists and in doing so to stimulate the interchange of ideas It was recognised that the topic spans an enormous breadth and little attempt was made to balance the very diverse areas Widespread active interest was shown in the conference and just over one hundred people registered The varied departments and institutions across North America from which the participants came made it both academically and geographically mixed The chief activity of the conference was the presentation of papers Nine invited guest speakers see table of contents each gave a one hour talk These covered a wide range of topics There were twenty five shorter twenty minute contributed papers and almost all papers were followed by a five minute question and discussion period Duplicated abstracts of presented papers were available at the meeting An evening informal discussion meeting of participants chaired by Dr A B Tayler and led by Drs E M Hagmeier E C

Some Mathematical Questions in Biology Alan Hastings, 1989-12-31 Population biology has had a long history of mathematical modeling The 1920s and 1930s saw major strides with the work of Lotka and Volterra in ecology and Fisher Haldane and Wright in genetics In recent years much more sophisticated mathematical

techniques have been brought to bear on questions in population biology. Simultaneously, advances in experimental and field work have produced a wealth of new data. While this growth has tended to fragment the field, one unifying theme is that similar mathematical questions arise in a range of biological contexts. This volume contains the proceedings of a symposium on Some Mathematical Questions in Biology held in Chicago in 1987. The papers all deal with different aspects of population biology, but there are overlaps in the mathematical techniques used. For example, dynamics of nonlinear differential and difference equations form a common theme. The topics covered are cultural evolution, multilocus population genetics, spatially structured population genetics, chaos, and the dynamics of epidemics and the dynamics of ecological communities.

Some Mathematical Questions in Biology George F. Oster, 1980-12-31. Covers material in three general categories: population dynamics, development and pattern formation, and physiological design.

Some Mathematical Questions in Biology Stephen Childress, 1981-12-31. Deals with two principal areas of theoretical biology: developmental biology and biomechanics.
