

The Social in Social Psychology

John D. Greenwood*

City University of New York Graduate Center

Abstract

In this paper, I make a critical plea for the rehabilitation of the theoretical conception of the intrinsically social dimensions of cognition, emotion, and behavior shared by early social psychologists but progressively neglected and abandoned in the last century. Some critical implications of this theoretical conception are considered, including its relation to contemporary theories of social cognition and the restrictive methodological prescriptions of experimental social psychology. Finally, I consider the relation between this conception and alternative theoretical traditions in social psychology, such as social representation theory and 'social identity' theory, cultural psychology, and social constructionism.

Introduction

In this paper, I make a critical plea for the rehabilitation of the rich and fertile theoretical conception of the social dimensions of cognition, emotion, and behavior advocated by early European and American social psychologists, which grounded the early distinction between individual and social (or collective) psychology, but which was progressively abandoned as the 20th century wore on¹ and eventually displaced by the 'social cognition' paradigm (Fiske & Taylor, 1982) in the 1980s and beyond.

I offer this plea as an exercise in critical psychology, albeit in a historical-analytical mode rather than more common contemporary modes that focus on discourse analysis, political power, and the ideological privileging of certain accounts of psychology over others (Henriques, Hollway, Urwin, Venn, & Walkerdine, 1984; Parker, 1999; Potter & Wetherell, 1987; Prilleltensky, 1997). According to these latter forms of critical psychology, the very attempt to explicate the difference between social and individual psychology may be seen as merely perpetuating an outdated dualism of social and individual that fails to do justice to the politically problematic nature of the social.

I don't deny the dangers of privileging some psychological theories and methods over others and especially the danger of rendering invisible legitimate and viable theories and methods that deserve to have their potential recognized by the discipline of social psychology. However, I also think that to claim that the distinction between social and individual psychology merely perpetuates a distorting and conservative dualism is one other way of rendering invisible the theoretical conception of the social that has been historically neglected by mainstream theories and practices of social psychology. Thus, my aim in this paper is to make a plea for a theoretical conception of the social that has been neglected by mainstream social psychology for most of the past century and which seems in some danger of remaining obscured by the dialogical and political reactions of mainstream critical psychology.

Social Dimension of Cognition, Emotion, and Behavior

Wilhelm Wundt, the father of experimental psychology, was also one of the first to make a distinction between individual and social psychology (or as he sometimes called it, 'folk' or 'cultural' psychology). Wundt (1897) recognized that a social community – or social group
