Solving the Mystery of Chinese Magic Squares Fung-Yuel Chang,2017-01-11 The 4000 year old mystery of Chinese magic squares is finally solved Magic squares have fascinated ordinary and serious mathematicians alike for four thousand years Great Yu discovered the first three by three magic square on the back of a turtle around the year 2200 B.C before he was crowned the first emperor in China Some three thousand years later in 1275 Yang Hui amused his countrymen with riddles describing the creations of third and fourth order magic squares Two hundred forty years later in 1514 Albrecht Durer unknowingly applied Yang Hui's diagonal reversal scheme to produce in the Western world the first magic square Some eighty years later in 1593 another Chinese mathematician Cheng Darwai produced a sixth order magic square with a unique magic sum in every row every column but only in each of its twin diagonals known as the main and secondary diagonals In this book for the first time F.Y Chang has deciphered Yang Hui's riddles and extends both ancient Chinese mathematician's works and develops algorithms to create magic squares beyond the computation capacity of super computers He formulates techniques such as parametric matrix formulation row column sum equalization triple orthogonal transformation and diagonal switching for creation of the classical Chinese magic squares He discovered the super diagonal Chinese magic squares with the magic sum in every generalized diagonal including the two conventional diagonals as well as an even number of four segment split diagonals Dr Chang also introduces the idea of Chinese magic square games which anyone of any age who is a number enthusiast can solve either by logical reasoning or by solving parametric linear equations

magic squares into 3 categories namely the 2N 1 4N and 4N 2 The categorization becomes the backbone of how we developed the methodology in solving the magic square Secondly the yin yang pairs of movable immovable and clockwise anticlockwise are used to solve magic square in few steps Each category has its own methodology The methodology derived from this is of graphical type Thus from this graphical type we can use the cut paste function another yin yang pair from Excel spreadsheet to solve the magic square especially for the higher order magic square Lastly the book teaches how to obtain the variation for solving the magic square For instance for magic square of order 9 you can obtain to more than 1 million solutions *Learn & Use Microsoft Excel in Your Classroom* Lynn Van Gorp,2007-06-21 Integrate technology into four content areas language arts science social studies and math by using Microsoft Excel in your classroom **Solving**

Nowlan,2017-05-13 The original title for this work was Mathematical Literacy What Is It and Why You Need it The current title reflects that there can be no real learning in any subject unless questions of who what when where why and how are raised in the minds of the learners The book is not a mathematical text and there are no assigned exercises or exams It is written for reasonably intelligent and curious individuals both those who value mathematics aware of its many important applications and others who have been inappropriately exposed to mathematics leading to indifference to the subject fear and even loathing These feelings are all consequences of meaningless presentations drill rote learning and being lost as the purpose of what is being studied Mathematics education needs a radical reform There is more than one way to accomplish this Here the author presents his approach of wrapping mathematical ideas in a story To learn one first must develop an interest in a problem and the curiosity to find how masters of mathematics have solved them What is necessary to

be mathematically literate It's not about solving algebraic equations or even making a geometric proof These are valuable skills but not evidence of literacy We often seek answers but learning to ask pertinent questions is the road to mathematical literacy Here is the good news new mathematical ideas have a way of finding applications This is known as the unreasonable effectiveness of mathematics [Proceedings of Fourth International Conference on Soft Computing for Problem Solving](#)
