I. Kattan, 2005-10-28 This is a book for people who love mechanics of composite materials and MATLAB We will use the popular computer package MATLAB as a matrix calculator for doing the numerical calculations needed in mechanics of composite materials In particular the steps of the mechanical calculations will be emphasized in this book The reader will not find ready made MATLAB programs for use as black boxes Instead step by step solutions of composite material mechanics problems are examined in detail using MATLAB All the problems in the book assume linear elastic behavior in structural mechanics The emphasis is not on mass computations or programming but rather on learning the composite material mechanics computations and understanding of the underlying concepts The basic aspects of the mechanics of fiber reinforced composite materials are covered in this book This includes lamina analysis in both the local and global coordinate systems laminate analysis and failure theories of a lamina **Materials and Process Selection for Engineering Design**

Mahmoud M. Farag, 2020-12-30 Introducing a new engineering product or changing an existing model involves developing designs reaching economic decisions selecting materials choosing manufacturing processes and assessing environmental impact These activities are interdependent and should not be performed in isolation from each other This is because the materials and processes used in making a product can have a major influence on its design cost and performance in service This Fourth Edition of the best selling Materials and Process Selection for Engineering Design takes all of this into account and has been comprehensively revised to reflect the many advances in the fields of materials and manufacturing including Increasing use of additive manufacturing technology especially in biomedical aerospace and automotive applications Emphasizing the environmental impact of engineering products recycling and increasing use of biodegradable polymers and composites Analyzing further into weight reduction of products through design changes as well as material and process selection especially in manufacturing products such as electric cars Discussing new methods for solving multi criteria decision making problems including multi component material selection as well as concurrent and geometry dependent selection of materials and joining technology Increasing use of MATLAB by engineering students in solving problems This textbook features the following pedagogical tools New and updated practical case studies from industry A variety of suggested topics and background information for in class group work Ideas and background information for reflection papers so readers can think critically about the material they have read give their interpretation of the issues under discussion and
