*Somatic Hybridization in Crop Improvement II* Toshiyuki Nagata, Y.P.S. Bajaj, 2012-12-06 This richly illustrated volume describes how somatic hybrids can contribute to the improvement of crops. It comprises 24 chapters dealing with interspecific and intergeneric somatic hybridization and cybridization providing valuable tools for plant breeders.

*Haploids in Crop Improvement II* Constantine E. Don Palmer, Wilfred A. Keller, Kenneth J. Kasha, 2006-01-27 Doubled haploid technology is an important tool for plant breeding. It allows for significant time reduction in the achievement of homozygous breeding lines of value in crop improvement. This volume provides an excellent overview of haploid induction and the application of doubled haploids. The authors emphasize advances made in the understanding of microspore embryogenesis but treat also advances in gynogenesis and the manipulation of parthenogenetic haploid development. The text contains a thorough discussion of the application of haploidy to the improvement of a number of species from various families including Brassicaceae, Poaceae and Solanaceae. The various methods applicable to these species are described in detail. Each chapter contains critical evaluation of the scientific literature and an extensive list of references. This volume is ideally suited for plant breeders, geneticists and plant cell biologists.

**Somatic Hybridization in Crop Improvement I** Y. P. S. Bajaj, 2012-12-06 Thirty five chapters on various aspects of fusion of plant protoplasts and somatic hybridization deal with the regeneration of interspecific and intergeneric somatic hybrids and cybrids in various plants cereals, grasses, legumes, potato, tomato, eggplant, lettuce, Brassica, Datura, Hyoscyamus, Nicotiana, Catharanthus, Rauwolfia, Citrus, Poncirus, Prunus, Pyrus, Populus, algae, bryophytes and ferns. The implications of somatic hybridization in gene transfer in wide crosses and for the induction of genetic variability in various crops are discussed. The book is an invaluable source of information for advanced students, teachers and research scientists in the field of plant breeding, genetic engineering, plant tissue culture and general plant biotechnology.

**Somatic Embryogenesis and Synthetic Seed II** Y. P. S. Bajaj, 1995-03-16 While working in the laboratory of Professor Dr Jacob Reinert at the Freie Universität Berlin 1974-1976 I had the opportunity to become deeply involved in studying the intricacies of the fascinating phenomenon of somatic embryogenesis in plant cells and protoplasts. In numerous stimulating discussions with Professor Reinert on this subject I was fully convinced that somatic embryogenesis would become one of the most important areas of study not only regarding basic and fundamental aspects but also for its application in crop improvement. During the last decade we have witnessed tremendous interest and achievements in the use of somatic embryos for the production of synthetic seeds for micro propagation, genetic transformation, cryopreservation and conservation of germplasm. The en masse production of somatic embryos in the bioreactors has facilitated some of these studies. Somatic embryos have now been induced in more than 300 plant species belonging to a wide range of families. It was therefore felt that a compilation of literature state of the art on this subject was necessary. Thus two volumes on Somatic

Embryo genesis and Synthetic Seed have been compiled which contain 65 chapters contributed by International experts Somatic Embryogenesis and Synthetic Seed I comprises 31 chapters arranged in 3 sections Section I Commitment of the cell to somatic embryogenesis early events anatomy molecular basis gene expression role of polyamines machine vision analysis of somatic embryos Section II Applications of somatic embryos technology of synthetic seed fluid drilling micropropagation genetic transfor mation through somatic embryos cryopreservation *Somatic Hybridization in Crop Improvement* ,2001

*Transgenic Crops I* Y.P.S. Bajaj,1999-11-02 Recently there has been tremendous progress in the genetic transformation of agricultural crops and plants resistant to insects herbicides and diseases have been produced field tested and patented Transgenic Crops I compiles this information on cereals grasses legumes and oilseed crops This book is of special interest to advanced students teachers and research workers in the field of plant breeding genetics molecular biology plant tissue culture and plant biotechnology in general BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved Medicinal and Aromatic Plants Y. P. S. Bajaj,1988 These book series cover the distribution economic importance conventional propagation micropropagation tissue culture studies and in vitro production of important medicinal and other pharmaceutical compounds in various medicinal and aromatic crops *Somatic Embryogenesis and Synthetic Seed* Y. P. S. Bajaj,1995 **Somatic Hybridization in Crop Improvement I** Y. P. S. Bajaj,1994-11-04 **Gene Manipulation in Plant Improvement II** J. Perry Gustafson,1990-12-31 There are clearly many directions in which the further development of the GUS gene fusion system can progress Some of these have been outlined above but others can be imagined There are no reasons to limit our conceptions of the use of GUS gene fusions to analysis and manipulation of single genes We can envision numerous marked genes perhaps with several new fusion systems giving valuable information about gene interaction or population structure The study of plan pathogen and plant symbiont interactions can progress rapidly with simple quantitative markers for genes and individuals We can imagine ways of using gene fusions to report on crop physiology or other complex phenotypes thereby enhancing the accuracy and speed of screening Introduction of the biosynthetic pathway for glucuronide detoxification by expressing genes for the UDP glucuronyl transferases in plants may result in novel mechanisms for plants to deal with xenobiotics such as insecticides or herbicides Synthesis of substrates which until now has been performed chemicall resulting in expensive compounds can be done biosynthetically This should make the system not only the most powerful gene fusion system for agriculture but also the most accessible

**Journey of a Single Cell to a Plant** S J Murch,Praveen K. Saxena,2005 In plants the ability to regenerate identical individuals from single cells is the basis for modern agriculture These scientific advancements have given us virus free stocks novel germplasms clonal propagation systems and the commercial introduc tion of difficult to propagate plant species The timescale for breeding programs was dramatically reduced as plant tissue culture technologies were developed to shorten the time between generations and reduce the number of generations required for a line to be developed Without the capacity to

regenerate plants it would not have been possible for plant biotechnology and genetic engineering to have advanced this far  
This book contains detailed reviews by the leading scientists who made these discoveries
