makers *Visible Learning and the Science of How We Learn* John Hattie, Gregory C. R. Yates, 2013-10-08 On publication in 2009 John Hattie's *Visible Learning* presented the biggest ever collection of research into what actually works in schools to improve children's learning. Not what was fashionable, not what political and educational vested interests wanted to champion, but what actually produced the best results in terms of improving learning and educational outcomes. It became an instant bestseller and was described by the TES as revealing education's holy grail. Now in this latest book John Hattie has joined forces with cognitive psychologist Greg Yates to build on the original data and legacy of the *Visible Learning* project, showing how its underlying ideas and the cutting edge of cognitive science can form a powerful and complementary framework for shaping learning in the classroom and beyond. *Visible Learning and the Science of How We Learn* explains the major principles and strategies of learning, outlining why it can be so hard sometimes and yet easy on other occasions. Aimed at teachers and students, it is written in an accessible and engaging style and can be read cover to cover or used on a chapter-by-chapter basis for essay writing or staff development. The book is structured in three parts: learning within classrooms, learning foundations, which explains the cognitive building blocks of knowledge acquisition and knowing thyself, which explores confidence and self-knowledge. It also features extensive interactive appendices containing study guide questions to encourage critical thinking, annotated bibliographic entries with recommendations for further reading, links to relevant websites, and YouTube clips. Throughout, the authors draw upon the latest international research into how the learning process works and how to maximise impact on students, covering such topics as teacher personality, expertise, and teacher-student relationships; how knowledge is stored and the impact of cognitive load; thinking fast and thinking slow; the psychology of self-control; the role of conversation at school and at home; invisible gorillas and the IKEA effect; digital native theory, myths, and fallacies about how people learn. This fascinating book is aimed at any student, teacher, or parent requiring an up-to-date commentary on how research into human learning processes can inform our teaching and what goes on in our schools. It takes a broad sweep through findings stemming mainly from social and cognitive psychology and presents them in a useable format for students and teachers at all levels, from preschool to tertiary training institutes. *The Bookseller, Newsdealer and Stationer*, 1899

School Reform and Research in Educational Psychology Ronald W. Marx, 2000 The legendary Greek figure Orpheus was said to have possessed magical powers capable of moving all living and inanimate things through the sound of his lyre and voice. Over time the Orphic theme has come to indicate the power of music to unsettle, subvert, and ultimately bring down oppressive realities in order to liberate the soul and expand human life without limits. The liberating effect of music has been a particularly important theme in twentieth-century African American literature. The nine original essays in *Black Orpheus* examine the Orphic theme in the fiction of such African American writers as Jean Toomer, Langston Hughes, Claude McKay, James Baldwin, Nathaniel Mackey, Sherley Anne Williams, Ann Petry, Ntozake Shange, Alice Walker, Gayl Jones, and Toni Morrison. The authors discussed in this volume depict music as a mystical, shamanistic, and

spiritual power that can miraculously transform the realities of the soul and of the world Here the musician uses his or her music as a weapon to shield and protect his or her spirituality Written by scholars of English music women s studies American studies cultural theory and black and Africana studies the essays in this interdisciplinary collection ultimately explore the thematic linguistic structural presence of music in twentieth century African American fiction **The New Education** ,1891 **Psychology in the Classroom** Phillida Salmon,1995 Phillida Salmon offers an alternative vision to the consumerist images of education which have prevailed in political thinking Using the approach of personal construct psychology she shows how meaning is centrally important This has profound implications for understanding how people learn and why they often fail to learn In tracing the logic of this approach in education the author considers the position of teachers and the possibilities and constraints of their own learning For pupils school learning is often unofficial and unintended In this the culture of school institutions plays a major part Differential pupil destinies are carried by special categorization The meaning of such labels is examined in this study BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved **Teaching to Learn** Guy Claxton,1990 **Journal of Education** ,1898 **Journal of Pedagogy** Albert Leonard,William Henry Metzler,Jacob Richard Street,1891
