*EBOOK: Teaching Secondary Science with ICT* Roy Barton, 2004-06-16 This book takes a practical approach to improving secondary science education with the use of Information and Communication Technology ICT while considering the broader educational issues that inform and underpin the approach. The material is presented from a teacher's perspective and explores issues such as the selection of resources, lesson planning, the impact of ICT on classroom organization and how ICT affects assessment. With topics ranging from using the Internet in school science to handling and interpreting data, *Teaching Secondary Science with ICT* is invaluable in helping teachers to make the most effective use of the ICT tools available to them. This practical book is essential reading for anyone involved in science education including trainee teachers, practising science teachers and their tutors and mentors. It is particularly useful to support a school science department's internal professional development programme.

**Teaching Secondary Science Using ICT** David Sang, Roger Frost, 2005 This book and accompanying CD ROM is the fifth in the ASE John Murray Science Practice series. It is a companion volume to *Teaching Secondary Biology*, *Chemistry* and *Physics* which looked at ways of teaching the subject content of science courses in secondary schools. The fourth book covered the complimentary aspect of scientific enquiry. This book also covers an area of science teaching that goes across the three disciplines: the use of ICT. Aimed at Heads of Departments and experienced teachers as well as newly qualified teachers and trainees, the book provides examples of good practice and lesson ideas from across the age and ability range. It offers help in evaluating hardware and software and suggests ways in which the use of ICT in science is likely to develop over the next few years. The accompanying CD ROM contains data files, Excel spreadsheets, modelling programs, hotlinks and PowerPoint templates.

*Teaching Secondary Science With Ict* Barton, Roy, 2004-06-01 This title is intended to identify the ways in which ICT can be used to enhance secondary science education.

**Aspects of Teaching Secondary Science** Sandra Amos, Richard Boohan, 2003-09-02 This book's structure reflects the different dimensions to learning science. The first section focuses on the importance of talk in the science classroom while the second explores the key role of practical work. The third section is concerned with the creative theoretical aspect of science. Section four follows this by considering the communication of ideas and how pupils learn to participate in the discourse of the scientific community. Section five emphasizes the place of science in the broader context, considering its moral and ethical dimensions and its place in a cultural context. Finally section six explores the complexity of the task faced by science teachers, highlighting the knowledge and skills science teachers must acquire in order to create an environment in which students are motivated to learn science.

**Learning to Teach Science in the Secondary School** Jenny Frost, Tony Turner, 2005 The

second edition of this popular student textbook presents an up to date and comprehensive introduction to the process and practice of teaching and learning science. Using ICT in Inquiry-Based Science Education Geraldo W. Rocha

Fernandes,António M. Rodrigues,Carlos Alberto Rosa Ferreira,2019-05-21 This book analyzes the main Information and Communication Technologies ICT used in science education and the main theoretical approaches that support science education mediated by ICT in order to show how digital technologies can be employed in Inquiry Based Science Education. It presents the results of a comprehensive review of studies focusing both on the use and effects of digital technologies in science education and on the different theoretical approaches that support the use of ICTs in science teaching. By doing so the book provides a useful summary of the current research in the field and a strong analysis of its limitations. It concludes that there are few studies that report strategies and didactics for the practical use of ICT in science classes and that the use of ICT in science education can't be seen as an isolated action without a theoretical basis to support it. Based on these conclusions the volume identifies the main ICTs used in inquiry activities the main steps in inquiry activities used in science education and their approaches to the use of ICT. It shows that the use of ICT in Inquiry Based Science Education allows students to develop more active work styles improved attitudes towards science better conceptual and theoretical understanding improved reasoning better modelling capabilities and improved teamwork along with improvements in other abilities. Using ICT in Inquiry Based Science Education will be a valuable resource for science teachers and science teacher educators looking for an introductory text that presents an overview of the scientific research analyzing the implementation of digital technologies in science teaching and that provides useful insights to all educators interested in using digital technologies to introduce their students in the world of scientific inquiry and research
