The twenty first century has seen a breathtaking expansion of statistical methodology both in scope and influence. Data science and machine learning have become familiar terms in the news as statistical methods are brought to bear upon the enormous data sets of modern science and commerce. How did we get here? And where are we going? How does it all fit together? Now in paperback and fortified with exercises, this book delivers a concentrated course in modern statistical thinking. Beginning with classical inferential theories, Bayesian, frequentist, Fisherian, individual chapters take up a series of influential topics: survival analysis, logistic regression, empirical Bayes, the jackknife and bootstrap, random forests, neural networks, Markov Chain Monte Carlo, inference after model selection and

dozens more. The distinctly modern approach integrates methodology and algorithms with statistical inference. Each chapter ends with class tested exercises and the book concludes with speculation on the future direction of statistics and data science.

Recoding Gender Janet Abbate, 2017-09-08. The untold history of women and computing. How pioneering women succeeded in a field shaped by gender biases. Today women earn a relatively low percentage of computer science degrees and hold proportionately few technical computing jobs. Meanwhile the stereotype of the male computer geek seems to be everywhere in popular culture. Few people know that women were a significant presence in the early decades of computing in both the United States and Britain. Indeed programming in postwar years was considered woman's work, perhaps in contrast to the more manly task of building the computers themselves. In *Recoding Gender* Janet Abbate explores the untold history of women in computer science and programming from the Second World War to the late twentieth century. Demonstrating how gender has shaped the culture of computing, she offers a valuable historical perspective on today's concerns over women's underrepresentation in the field. Abbate describes the experiences of women who worked with the earliest electronic digital computers, Colossus the wartime codebreaking computer at Bletchley Park outside London and the American ENIAC developed to calculate ballistics. She examines postwar methods for recruiting programmers and the 1960s redefinition of programming as the more masculine software engineering. She describes the social and business innovations of two early software entrepreneurs, Elsie Shutt and Stephanie Shirley, and she examines the career paths of women in academic computer science. Abbate's account of the bold and creative strategies of women who loved computing, work excelled at it, and forged successful careers will provide inspiration for those working to change gendered computing culture.
