**Technical Calculus** Dale Ewen, Michael A. Topper, 1977    **Technical Calculus with Analytic Geometry** Peter Kuhfittig, 2012-08-21 This text is written for today's technology student with an accessible intuitive approach and an emphasis on applications of calculus to technology. The text's presentation of concepts is clear and concise with examples worked in great detail enhanced by marginal annotations and supported with step by step procedures whenever possible. Another powerful enhancement is the use of a functional second color to help explain steps. Differential and integral calculus are introduced in the first five chapters while more advanced topics such as differential equations and LaPlace transforms are covered in later chapters. This organization allows the text to be used in a variety of technology programs.    **Technical Calculus with Analytic Geometry** John C. Peterson, 1998-12 This new edition is written for students preparing for technical engineering technology or scientific careers. It begins with thorough coverage of topics in precalculus calculus and differential equations with an emphasis on how they relate to technical applications. The student has the opportunity to solve problems much as they will in their future career through the text's extensive applications and integrated use of technology. The text and exercises are designed to help students learn mathematical concepts and skills. Once these skills have been learned students are encouraged to use graphing calculators to solve difficult problems with greater ease. Hints, notes and cautions are found throughout the text to provide problem solving techniques. **Word Meaning and Belief** S.G. Pulman, 2016-11-18 First published in 1983 the aim of this book is to diagnose linguists failure to advance satisfactory theories of lexical meaning then to propose the requirements that such a theory should meet and drawing on work in philosophy and psychology to take the first steps towards satisfying these requirements It begins by discussing the work of Quine on the indeterminacy of translation and it is shown that attempts by linguists to answer Quine's arguments by proposing universal semantic primitives or their equivalents is unsatisfactory The relation between the theory of word meaning and the theory of categorisation is explored and an alternative to Rosch's family resemblance account of the prototype effect in both nouns and verbs is provided The author argues that identification of certain implicit categories like action and event can be related to principles of individuation and builds on the work of Kripke and Putnam on proper names and natural kind terms This book will be of interest to students of linguistics and the philosophy of language
