**Iterates of Piecewise Monotone Mappings on an Interval** Chris Preston, 2006-11-15 Piecewise monotone mappings on an interval provide simple examples of discrete dynamical systems whose behaviour can be very complicated These notes are concerned with the properties of the iterates of such mappings The material presented can be understood by anyone who has had a basic course in one dimensional real analysis The account concentrates on the topological as opposed to the measure theoretical aspects of the theory of piecewise monotone mappings As well as offering an elementary introduction to this theory these notes also contain a more advanced treatment of the problem of classifying such mappings up to topological conjugacy [Iterates of Piecewise Monotone Mappings on an Interval](#) Christopher J. **Iteration Theory - Proceedings Of The European Conference** C Simo, Christian Mira, Gyoergy Targonski, Norbert Netzer, 1991-07-22 The main topics of this proceedings stress the interactions between the theory of functional equations and the theory of dynamical systems A total of 38 invited lectures are included [Iteration Theory - Proceedings Of The European Conference](#) W Forg-rob, Norbert Netzer, Christian Mira, Gyoergy Targonski, Detlef Gronau, 1996-07-03 Iteration theory has its roots in the operation of substituting functions into itself This has led to questions like that of the behaviour of functions by repeating this substitution and when the number of iterations tends to infinity The terms orbit and chaos appropriately describe this behaviour Dynamical systems and the theory of functional equations play important roles in this field

**Iteration Theory (Ecit 91) - Proceedings Of The European Conference** J P Lampreia, Jaume Llibre, Christian Mira, Gyoergy Targonski, Jose Sousa Ramos, 1992-12-18 The main theme of the ECIT conferences is Iteration Theory on the borderline between Dynamics and Functional Equations The aim is to foster symbiosis between mainstream dynamics and iteration theory treated in the style of functional equations theory The following topics are focused turbulence and iteration characterization of chaos kneading theory symbolic dynamics bifurcation periods of maps topological dynamics discrete retarded dynamical systems cellular automata as dynamical systems iterative roots of formal power series iterative roots of polynomials phantom iterative roots iterative groups and semigroups families of commuting functions algebraic aspects of iteration theory and functional equations *Acta Scientiarum Mathematicarum* József Attila Tudományegyetem, 1990

**From Phase Transitions to Chaos** G[á]za Gy[ő]rgyi, 1992 This volume comprises about forty research papers and essays covering a wide range of subjects in the forefront of contemporary statistical physics The contributors are renowned scientists and leading authorities in several different fields This book is dedicated to Péter Szpálusy on the occasion of his sixtieth birthday Emphasis is placed on his two main areas of research namely phase transitions and chaotic dynamical systems as they share common aspects like the applicability of the probabilistic approach or scaling behaviour and universality Several papers deal with equilibrium phase transitions critical

dynamics and pattern formation Also represented are disordered systems random field systems growth processes and neural network Statistical properties of interacting electron gases such as the Kondo lattice the Wigner crystal and the Hubbard model are treated In the field of chaos Hamiltonian transport and resonances strange attractors multifractal characteristics of chaos and the effect of weak perturbations are discussed A separate section is devoted to selected mathematical aspects of dynamical systems like the foundation of statistical mechanics including the problem of ergodicity and rigorous results on quantum chaos

Stochastic processes with independent increments on a group are generalized to the concept of white noise on a Hopf algebra or bialgebra The main purpose of the book is the characterization of these processes as solutions of quantum stochastic differential equations in the sense of R L Hudson and K R Parthasarathy The notes are a contribution to quantum probability but they are also related to classical probability quantum groups and operator algebras The Azma martingales appear as examples of white noise on a Hopf algebra which is a deformation of the Heisenberg group The book will be of interest to probabilists and quantum probabilists Specialists in algebraic structures who are curious about the role of their concepts in probability theory as well as quantum theory may find the book interesting The reader should have some knowledge of functional analysis operator algebras and probability theory

*Traces of Differential Forms and Hochschild Homology* Reinhold Hübl, 1989-03-22 This monograph provides an introduction to as well as a unification and extension of the published work and some unpublished ideas of J Lipman and E Kunz about traces of differential forms and their relations to duality theory for projective morphisms The approach uses Hochschild homology the definition of which is extended to the category of topological algebras Many results for Hochschild homology of commutative algebras also hold for Hochschild homology of topological algebras In particular after introducing an appropriate notion of completion of differential algebras one gets a natural transformation between differential forms and Hochschild homology of topological algebras Traces of differential forms are of interest to everyone working with duality theory and residue symbols Hochschild homology is a useful tool in many areas of  $k$  theory The treatment is fairly elementary and requires only little knowledge in commutative algebra and algebraic geometry

DYNAMICS REPORTED reports on recent developments in dynamical systems Dynamical systems of course originated from ordinary differential equations Today dynamical systems cover a much larger area including dynamical processes described by functional and integral equations by partial and stochastic differential equations etc Dynamical systems have involved remarkably in recent years A wealth of new phenomena new ideas and new techniques are proving to be of considerable interest to scientists in rather different fields It is not surprising that thousands of publications on the theory itself and on its various applications are appearing DYNAMICS REPORTED presents carefully written articles on major subjects in dynamical

systems and their applications addressed not only to specialists but also to a broader range of readers including graduate students Topics are advanced while detailed exposition of ideas restriction to typical results rather than the most general one and last but not least lucid proofs help to gain the utmost degree of clarity It is hoped that DYNAMICS REPORTED will be useful for those entering the field and will stimulate an exchange of ideas among those working in dynamical systems

Komatsu, 1993-03-08 In these proceedings of the international conference held in Kyoto in memory of the late Professor K. Sakai, twenty six invited speakers display in their many facets of functional analysis and its applications in the research tradition of Yosida's school. Many of the topics are related to linear and non linear partial differential equations including the Schrödinger equations, the Navier Stokes equations and quasilinear hyperbolic equations. Several of the papers are survey articles, the others are original unpublished and refereed research articles. Also included is a full listing of the publications of K. Yosida. Recommended to students and research workers looking for a bird's eye view of current research activity in functional analysis and its applications.
