algorithmic techniques and offers overviews of fundamental topics that are traditionally put off until later courses The book includes thirty well developed independent projects that encourage students to explore questions across disciplinary boundaries Each is motivated by a problem that students can investigate by developing algorithms and implementing them as Python programs The book s accompanying website <http://discoverCS.denison.edu> includes sample code and data files pointers for further exploration errata and links to Python language references Containing over 600 homework exercises and over 300 integrated reflection questions this textbook is appropriate for a first computer science course for computer science majors an introductory scientific computing course or at a slower pace any introductory computer science course     Spooks
