## **Southern Seas:**

*Antarctica and the Southern Ocean* Nicholas Golledge, Eileen Hofmann, Marilyn Raphael, Letizia Tedesco, 2024-06-26

Antarctica is our southernmost continent. It is nearly double the size of Australia. Antarctica is covered almost entirely by land ice called the Antarctic Ice Sheet and is surrounded by the Southern Ocean. The Southern Ocean influences climate by taking up heat and carbon dioxide from the atmosphere and storing it in deep waters. The cloud processes and aerosols over the Southern Ocean are complex and are important challenges for climate models. To understand the climate of the past, polar scientists drill ice cores through the Antarctic Ice Sheet. The ice core is a powerful tool that we can use to determine how the Earth's climate has changed, and the information provided by historical ice cores has become extremely valuable for predicting the future scenarios of our planet. This ice is the largest reservoir of fresh water on Earth. The Antarctic Ice Sheet flows down into the Southern Ocean where parts of it start to float. These large floating platforms of ice are called ice shelves. Knowledge of the sensitivity and interaction of ice shelves to changes in atmosphere and ocean is important to understand the contribution of Antarctica to global sea level rise and the Southern Ocean and global marine ecosystems. If melted, the Antarctic Ice Sheet would be a major contributor to global sea level rise. In winter, the surface of the ocean around Antarctica freezes and sea ice forms. At the height of winter, the area of sea ice that forms is as large as Antarctica itself, but it melts back to the continent every summer. The amount of sea ice that forms in winter and melts back each summer is different. We examine this annual fluctuation of sea ice area around Antarctica for indications of climate change. Sea ice provides important habitats for primary producers such as sea ice algae and Antarctic krill, a keystone species of the Southern Ocean ecosystem. Sea ice is also an important habitat for penguins and seals. This collection aims to inform young readers about fundamental knowledge and digested cutting edge science that will help increase their understanding of Antarctica and its central role as a global climate driver. In addition to the Editors hosting, we would acknowledge the coordination and organization efforts of Pat Wongpan.

*Time-Series Observations of Ocean Acidification: a Key Tool for Documenting Impacts on a Changing Planet* Abed El Rahman Hassoun, Adrienne J. Sutton, Sam Dupont, Jose Martin Hernandez-Ayon, Xianghui Guo, 2025-04-15

Ocean acidification is a global phenomenon with local effects. Marine ecosystems are facing multiple stressors leading to significant changes. Time series observations are the basis to understand these changes and distinguishing between natural and anthropogenic variability of physical, chemical, and biological components of marine environments. Moreover, field monitoring is often neglected as a tool to document the responses of marine organisms and key habitats to ocean acidification. Time series observations of ocean acidification are thus critical to understanding the current threats that the ocean's ecosystems are witnessing and efficiently developing and implementing adaptation and mitigation solutions. Time series dedicated to observing ocean acidification, other stressors, as well as biological parameters, are the baseline for long term assessment of the ocean's health and for evaluating the efficiency of local and global actions.

toward achieving climate targets Therefore the goal of this Research Topic is to highlight the latest research efforts conducted to document ocean acidification patterns and trends and their consequences on marine life In this issue we will focus on new and old time series stations efforts to bridge physical chemical and biological observations and their application for modeling and future projections

**The Physical Geography of the Sea, and Its Meteorology** Matthew Fontaine Maury,1874    **Through the South Seas with Jack London** Martin Johnson,1913    **Chambers's encyclopædia** Chambers W. and R., ltd,1874    *Report of the ... Meeting* ,1877    **Wild Life in Southern Seas** Louis Becke,2023-07-18

An adventurer at heart author Louis Becke brings to life his many exciting encounters with the wildlife of southern seas From the blue shark to the loggerhead turtle readers will be transported into another world filled with fascinating creatures This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it This work is in the public domain in the United States of America and possibly other nations Within the United States you may freely copy and distribute this work as no entity individual or corporate has a copyright on the body of the work Scholars believe and we concur that this work is important enough to be preserved reproduced and made generally available to the public We appreciate your support of the preservation process and thank you for being an important part of keeping this knowledge alive and relevant

*Synoptic Analysis Over the Southern Oceans* C. E. Palmer,1942 This paper is in three parts Part I is a historical survey which brings out the importance of the migratory anticycles of the Australian region to the theories of the Southern Hemisphere atmospheric circulation developed by Dunsell Lockyer Kidson and others Part II shows that the trough between two migratory anticyclones in the West Australian region is frequently occupied by a single front of the cold front type meridional front and touches on the importance of such fronts to the meteorology of the Tasman Sea New Zealand area Part III is devoted to the thesis supported by analysis of oceanic weather observations that the migratory anticyclone originates in the South Indian Ocean as the result of the outbreak of polar air in the rear of an occluded wave on the South Indian Polar Front Abstract
