Sourcebook Of Parallel Computing:

Sourcebook of Parallel Computing J. J. Dongarra, Ian Foster, Geoffrey Fox, Ken Kennedy, Linda Torczon, 2003 Parallel Computing is a compelling vision of how computation can seamlessly scale from a single processor to virtually limitless computing power. Unfortunately the scaling of application performance has not matched peak speed and the programming burden for these machines remains heavy. This book represents the collected knowledge and experience of over 30 leading parallel computing researchers. They offer readers a complete sourcebook with solid coverage of parallel computing hardware, programming considerations, algorithms, software, and enabling technologies as well as several parallel application case studies.
