**Resource Nationalism and Energy Policy** David R. Mares,2022-10-04 It is widely thought that state ownership of natural resources oil and natural gas in particular causes countries to fall under the sway of the resource curse In such cases governments allegedly display resource nationalism which destabilizes the economy society and politics In this book David R Mares dispels these beliefs and develops a powerful new account of the relationship between state resource ownership and energy policy Mares examines variations in energy policy across a wide range of countries underscoring the fact that in most of the world outside the United States subsoil natural resources are owned by the state He considers the history of Latin American oil and gas policies and provides an in depth analysis of Venezuela from 1989 to 2016 before during and after the presidency of Hugo Ch vez Mares demonstrates that the key factors that influence energy policy are the inclusiveness of the political system the level of competitiveness within policy making and the characteristics of individual leaders Domestic politics not state ownership determines the effectiveness and efficiency of energy policies the resource curse is avoidable Drawing on these findings Mares reconceptualizes resource nationalism arguing that government intervention into resource extraction is legitimate as long as the benefits are shared through the provision of public goods Featuring a sophisticated grasp of both Latin American politics and energy policy this book sheds new light on why some

governments are responsible stewards of natural resources while others appropriate national wealth for partisan or private benefit *Energy Prices and Taxes*, 2003 **Energy Policies of IEA Countries**, 2003 **Flexibility in Natural Gas**

Sylvie Cornot-Gandolphe, Ralf Dickel, Organisation for Economic Co-operation and Development, International Energy Agency, 2002 Flexibility is needed to cover seasonal swings and variations in gas demand as well as to maintain short term supply security in the case of a disruption of a supply source. In order to balance supply and demand gas companies have devised a variety of flexibility tools such as supply swing storage and interruptible contracts. This book analyses how new flexibility tools and mechanisms are developing with market liberalisation and considers the differences in flexibility requirements and provisions among IEA member countries [Why Carbon Fuels Will Dominate the 21st Century's Global Energy Economy](#) Peter R. Odell, 2004

This text provides a survey of the energy resources for the foreseeable future and argues that there is not nor has there been a supply crisis. It contends that the current claims of impending disaster are as falsely based as those first made in the 1960s albeit for different reasons. This book argues that most attempts at reasonable analysis are undermined by the poor quality and confusing nature of much of the statistical data available much of the confusion deliberately sowed by governments and oil companies to create impressions that best served them at different times. Data is interpreted in a coherent way concluding that the predicted supply crisis is not going to be a near term phenomenon

**Developing China's Natural Gas Market** International Energy Agency, Organisation for Economic Co-operation and Development, 2002 Driven by an increasing recognition of the many advantages of natural gas and by the need to diversify its coal dominated energy supply China's natural gas industry is poised for rapid expansion. Some major gas infrastructure projects have been launched to support ambitious gas growth targets in the country for the next five years and beyond. Other countries within the IEA and outside have faced similar challenges in developing their gas markets but the challenges faced by China are far greater. Chinese gas reserves are relatively limited and are located far from the main centres of demand. Cheap alternatives are available there is a lack of related technology and skill and knowledge of how best to develop markets is not widespread. This report attempts to address these challenges [HMSO Agency Catalogue](#) Great Britain. Her Majesty's Stationery Office, 2003

**World Energy Outlook**, 2002 The IEA's Economic Analysis Division EAD with input from other Divisions produces the World Energy Outlook the IEA's flagship publication. In even numbered years the EAD publishes a global energy survey including detailed long term projections of energy demand energy supply and CO2 emissions. The WEO looks from 20 to 30 years into the future and its projections are based on the World Energy Model. The World Energy Outlook Insights series cover a single aspect of energy like subsidies in 1999 and global supply in 2001. The WEO Insights series are published in odd numbered years [Bolivia, Selected Issues](#), 2006 **OECD Economic Surveys**, 2005 *Index to International Statistics*, 2005 [Bolivia](#) Eugenio Cerutti, 2008 The hydrocarbons sector has become one of the most dynamic economic activities in the Bolivian economy and the main driver of improved export performance and

international reserve accumulation The central role of the hydrocarbons sector in the economy is attributable to the high levels of investment made in the late 1990s which permitted much higher production levels particularly of natural gas However those positive developments in the hydrocarbons sector have given rise to the possibility of a new case of Dutch disease While Bolivia's economy has already seen many benefits from its higher gas exports especially in terms of lower external vulnerability and improved fiscal stance the new resources could also limit the development of other economic sectors in terms of output and factor income This paper explores the transmission channels of Dutch disease as well as its main symptom the appreciation of the real exchange rate **Natural Gas Information** ,2004 **The Stationery Office Agency Catalogue** Stationery Office (Great Britain),2003 [The OECD Observer](#) ,2003-03
