Dr. Apurva Das

The Force:

The Force Is with You Always! Richard Koepke, 2011-02-16 This book teaches people how Spirit operates directly in our lives today and what we must do to live life to the fullest and with malice toward none It teaches spiritual principles on how to live life with gratitude acceptance joy abundance and wellness It connects us with our eternal being within and encourages us to create our own soul music without Have we lost our way as a society In the wake of humans murdering over 100 million other humans in the past century many of us are seeking answers to the ever increasing cultural violence surrounding us From capital punishment to going postal we live in a very violent society Hardly a day passes without news of government torture prisons drive by shootings a ten year old boy murdering his father or a congresswoman being shot in the head Shocking revelations such as American government doctors using unsuspecting American citizens as human guinea pigs for decades of medical experiments further alienate the government from the people that they are supposed to serve It seems to me that we need a new vision of humanity that our faltering institutions have failed to provide I believe that we need to replace institutional blight with greater spirituality We need a new spirit of integrity that replaces the often deceitful and violent leadership we currently embrace We need to challenge the don't get mad get even mentality in our society with greater understanding for one another We need to be role models for positive reinforcement learning rather than the punishment that only teaches more violence and hatred and like the Montagues and Capulets the never ending need to seek revenge This book addresses how to live a life of health and wellness in the midst of a truly sick society

Fluid Dynamics Dr. Apurva Das, This kind of fluid dynamics book offers both the theoretical foundations and practical applications of fluid flow beginning with properties of fluids it includes many solved examples and problem sets to build understanding useful for engineering applied science and competitive exams Covers fluid statics equilibrium pressure variation buoyancy before moving on to fluid motion kinematics and dynamics Derivations of fundamental equations continuity equation Euler's equation Navier Stokes equations Study of ideal flow vs viscous flow incompressible and compressible flow Boundary layer theory its formation characteristics laminar vs turbulent behavior Special flows flow around bodies drag similarity and scaling
