Substructural Logics: A Primer F. Paoli, 2013-11-27 Substructural logics are by now one of the most prominent branches of the research field usually labelled as nonclassical logics and perhaps of logic tout court Over the last few decades a vast amount of research papers and even some books have been devoted to this subject The aim of the present book is to give a comprehensive account of the state of the art of substructural logics focusing both on their proof theory especially on sequent calculi and their generalizations and on their semantics both algebraic and relational Readership This textbook is designed for a wide readership graduate students in either philosophy mathematics theoretical computer science or theoretical linguistics with no previous knowledge of the subject except for a working knowledge of elementary logic will be gradually introduced into the field starting from its basic foundations specialists and researchers in the area will find an up to date survey of the most important current research topics and problems

Residuated Structures in Algebra and Logic George Metcalfe, Francesco Paoli, Constantine Tsinakis, 2023-11-06 This book is an introduction to residuated structures viewed as a common thread binding together algebra and logic The framework includes well studied structures from classical abstract algebra such as lattice ordered groups and ideals of rings as well as structures serving as algebraic semantics for substructural and other non classical logics Crucially classes of these structures are studied both algebraically yielding a rich structure theory along the lines of Conrad's program for lattice ordered groups and algorithmically via analytic sequent or hypersequent calculi These perspectives are related using a natural notion of equivalence for consequence relations that provides a bridge offering benefits to both sides Algorithmic methods are used to establish properties like decidability amalgamation and generation by subclasses while new insights into logical systems are obtained by studying associated classes of structures The book is designed to serve the purposes of novices and experts alike The first three chapters provide a gentle introduction to the subject while subsequent chapters provide a state of the art account of recent developments in the field

Logic and Implication Petr Cintula, Carles Noguera, 2022-01-01 This monograph presents a general theory of weakly implicative logics a family covering a vast number of non classical logics studied in the literature concentrating mainly on the abstract study of the relationship between logics and their algebraic semantics It can also serve as an introduction to abstract algebraic logic both propositional and first order with special attention paid to the role of implication lattice and residuated connectives and generalized disjunctions Based on their recent work the authors develop a powerful uniform framework for the study of non classical logics In a self contained and didactic style starting from very elementary notions they build a general theory with a substantial number of abstract results The theory is then applied to obtain numerous results for prominent families of logics and their algebraic counterparts in particular for superintuitionistic modal substructural fuzzy and relevant logics The book may be of interest to a wide audience especially students and scholars in the fields of mathematics philosophy computer science or related areas looking for an introduction to a general theory of non classical logics and their algebraic semantics

Michael Dunn, 2008 Nonclassical logics have played an increasing role in recent years in disciplines ranging from mathematics and computer science to linguistics and philosophy Generalized Galois Logics develops a uniform framework of relational semantics to mediate between logical calculi and their semantics through algebra This volume addresses normal modal logics such as K and S5 and substructural logics including relevance logics linear logic and Lambek calculi The authors also treat less familiar and new logical systems with equal deftness
