Streitberger, Hilde Van Gelder, 2019-05-31 The canonical legacy of Allan Sekula in contemporary visual art *Disassembled Images* takes as a point of departure Allan Sekula's productive approach of disassembling elements in order to reassemble them in alternative constellations. Some of the most pressing issues of our time such as human labor in a globalized economy or the claim for radical democracy are recurrent themes in Sekula's oeuvre and are investigated by a wide range of experts in this book. Addressing a variety of artworks both by Sekula and other artists, the collected essays focus on three crucial aspects within recent politically engaged art: collecting as a tool for representing folly and madness, the confrontation of the maritime space of ecological disasters and geopolitical processes with alternative models of solidarity, and what Sekula named critical realism as a reflective method in search of new social agencies and creative freedom. A text-image portfolio by Marco Poloni completes this profound reflection on Sekula's influential legacy within contemporary visual art. Assistant editor: Federica Mantoan. **Reviving the Living** Yair Neuman, 2011-08-30 *Reviving the Living: Meaning Making in Living Systems* presents a novel perspective that relates to current biological knowledge and issues. Written by polymath Dr Yair Neuman, the book challenges the dogmas that frame our understanding of living systems and presents a radical alternative approach to understanding the world around us, one that avoids the pitfalls of non-scientific perspectives such as Vitalism and Creationism. In this thought-provoking and iconoclastic manuscript, Neuman follows the footsteps of Gregory Bateson, Mikhail Bakhtin, Michael Polanyi, and others to suggest that living systems are meaning-making systems. The book delves into the unique processes of meaning-making that characterize organisms as a unique category of nature and offers new and fascinating insights into a variety of enigmatic biological phenomena, from immune memory to hidden life, cryptobiosis. It consists of four parts divided into 18 chapters and covers topics ranging from reductionism and its pitfalls to genetics, why organisms are irreducible, immunology, meaning-making in language, and biology, meaning-bridging the gap between physics and semantics, context and memory, and the poetry of living. Core concepts and themes are illustrated using examples based in current science. This text would be of high

interest to biologists philosophers cognitive scientists psychologists and semioticians as well as to any reflective individual who is willing to examine the realm of the living from a novel and fascinating perspective Presents a novel perspective that relates to current biological knowledge and issues Poses thought provoking ideas for theoretical biologists those studying philosophy of science and the mind cognitive scientists semioticians and people involved with Artificial Intelligence Includes examples based in current science to illustrate core concepts and themes The World Book encyclopedia World Book, Inc,2000 An encyclopedia designed especially to meet the needs of elementary junior high and senior high school students
