**The Laboratory Approach to Teaching Calculus** L. Carl Leinbach, Joan R. Hundhausen, Arnold M. Ostebee, Lester J. Senechal, Donald B. Small, 1991    [The Teaching and Learning of Mathematics at University Level](#) Derek Holton, 2001-09-30

This is a text that contains the latest in thinking and the best in practice. It provides a state of the art statement on tertiary teaching from a multi perspective standpoint. No previous book has attempted to take such a wide view of the topic. The book will be of special interest to academic mathematicians, mathematics educators and educational researchers. It arose from the ICMI Study into the teaching and learning of mathematics at university level initiated at the conference in Singapore 1998.

[Research in Collegiate Mathematics Education IV](#) Ed Dubinsky, 2000 This fourth volume of Research in Collegiate Mathematics Education RCME IV reflects the themes of student learning and calculus. Included are overviews of calculus reform in France and in the U.S. and large scale and small scale longitudinal comparisons of students enrolled in first year reform courses and in traditional courses. The work continues with detailed studies relating students' understanding of calculus and associated topics. Direct focus is then placed on instruction and student comprehension of courses other than calculus, namely abstract algebra and number theory. The volume concludes with a study of a concept that overlaps the areas of focus: quantifiers. The book clearly reflects the trend towards a growing community of researchers who systematically gather and distill data regarding collegiate mathematics teaching and learning. This series is published in cooperation with the Mathematical Association of America.

*International Handbook of Mathematics Education* Alan Bishop, M.A. (Ken) Clements, Christine Keitel-Kreidt, Jeremy Kilpatrick, Colette Laborde, 2012-12-06 ALAN J BISHOP Monash University Clayton Victoria Australia RATIONALE Mathematics Education is becoming a well documented field with many books, journals and international conferences focusing on a variety of aspects relating to theory, research and practice. That documentation also reflects the fact that the field has expanded enormously in the last twenty years. At the 8th International Congress on Mathematics Education ICME in Seville Spain for example there were 26 specialist Working Groups and 26 specialist Topic Groups as well as a host of other group activities. In 1950 the Commission Internationale pour l'Etude et l'Amélioration de l'Enseignement des Mathématiques CIEAEM was formed and twenty years ago another active group, the International Group for the Psychology of Mathematics Education PME began at the third ICME at Karlsruhe in 1976. Since then several other specialist groups have been formed and are also active through regular conferences and publications as documented in Edward Jacobsen's Chapter 34 in this volume.

The book offers ideas for the structure of an integrated program of professional development.
