The Languages Of Edisons Light Inside Technology:

The Languages of Edison's Light Charles Bazerman, 1999 **Vulnerability in Technological Cultures** Anique Hommels, Jessica Mesman, Wiebe E. Bijker, 2014-03-21 Novel technologies and scientific advancements offer not only opportunities but risks Technological systems are vulnerable to human error and technical malfunctioning that have far reaching consequences one flipped switch can cause a cascading power failure across a networked electric grid Yet once addressed vulnerability accompanied by coping mechanisms may yield a more flexible and resilient society This book investigates vulnerability in both its negative and positive aspects in technological cultures The contributors argue that viewing risk in terms of vulnerability offers a novel approach to understanding the risks and benefits of science and technology Such an approach broadens conventional risk analysis by connecting to issues of justice solidarity and livelihood and enabling comparisons between the global north and south The book explores case studies that range from agricultural practices in India to neonatal intensive care medicine in Western hospitals these cases spanning the issues addressed in the book illustrate what vulnerability is and does The book offers conceptual frameworks for empirical description and analysis of vulnerability that elucidate its ambiguity context dependence and constructed nature Finally the book addresses the implications of these analyses for the governance of vulnerability proposing a more reflexive way of dealing with vulnerability in technological cultures

Memory Practices in the Sciences Geoffrey C. Bowker, 2008-02-15 How the way we hold knowledge about the past in books in file folders in databases affects the kind of stories we tell about the past The way we record knowledge and the web of technical formal and social practices that surrounds it inevitably affects the knowledge that we record The ways we hold knowledge about the past in handwritten manuscripts in printed books in file folders in databases shape the kind of stories we tell about that past In this lively and erudite look at the relation of our information infrastructures to our information Geoffrey Bowker examines how over the past two hundred years information technology has converged with the nature and production of scientific knowledge His story weaves a path between the social and political work of creating an explicit indexical memory for science the making of infrastructures and the variety of ways we continually reconfigure lose and regain the past At a time when memory is so cheap and its recording is so protean Bowker reminds us of the centrality of what and how we choose to forget In *Memory Practices in the Sciences* he looks at three memory epochs of the nineteenth twentieth and twenty first centuries and their particular reconstructions and reconfigurations of scientific knowledge The nineteenth century's central science geology mapped both the social and the natural world into a single time package despite apparent discontinuities as in a different way did mid twentieth century cybernetics Both Bowker argues packaged time in ways indexed by their information technologies to permit traffic between the social and natural worlds Today's sciences of biodiversity meanwhile database the world in a way that excludes certain spaces entities and times We use the tools of the present to look at the past says Bowker we project onto nature our modes of

organizing our own affairs **Developer's Dilemma** Casey O'Donnell, 2014-11-21 Step inside the shoes of video game creators in this fascinating look at game development and how it can inform our understanding of work Rank and file game developers bring videogames from concept to product and yet their work is almost invisible hidden behind the famous names of publishers executives or console manufacturers In this book Casey O'Donnell examines the creative collaborative practice of typical game developers His investigation of why game developers work the way they do sheds light on our understanding of work the organization of work and the market forces that shape and are shaped by media industries O'Donnell shows that the ability to play with the underlying systems technical conceptual and social is at the core of creative and collaborative practice which is central to the New Economy When access to underlying systems is undermined so too is creative collaborative process Drawing on extensive fieldwork in game studios in the United States and India O'Donnell stakes out new territory empirically conceptually and methodologically Mimicking the structure of videogames the book is divided into worlds within which are levels and each world ends with a boss fight a rant about lessons learned and tools mastered O'Donnell describes the process of videogame development from pre production through production considering such aspects as experimental systems socially mandatory overtime and the perpetual startup machine that exhausts young initially enthusiastic workers He links work practice to broader systems of publishing manufacturing and distribution introduces the concept of a privileged actor intra internetwork and describes patent and copyright enforcement by industry and the state

Producing Power Sonja D. Schmid, 2015-02-13 An examination of how the technical choices social hierarchies economic structures and political dynamics shaped the Soviet nuclear industry leading up to Chernobyl The Chernobyl disaster has been variously ascribed to human error reactor design flaws and industry mismanagement Six former Chernobyl employees were convicted of criminal negligence they defended themselves by pointing to reactor design issues Other observers blamed the Soviet style of ideologically driven economic and industrial management In *Producing Power* Sonja Schmid draws on interviews with veterans of the Soviet nuclear industry and extensive research in Russian archives as she examines these alternate accounts Rather than pursue one definitive explanation she investigates how each of these narratives makes sense in its own way and demonstrates that each implies adherence to a particular set of ideas about high risk technologies human machine interactions organizational methods for ensuring safety and productivity and even about the legitimacy of the Soviet state She also shows how these attitudes shaped and were shaped by the Soviet nuclear industry from its very beginnings Schmid explains that Soviet experts established nuclear power as a driving force of social not just technical progress She examines the Soviet nuclear industry's dual origins in weapons and electrification programs and she traces the emergence of nuclear power experts as a professional community Schmid also fundamentally reassesses the design choices for nuclear power reactors in the shadow of the Cold War's arms race Schmid's account helps us understand how and why a complex sociotechnical system broke down Chernobyl while unique and specific to the Soviet experience can also provide valuable

lessons for contemporary nuclear projects **A Complete Guide to the Language of Lighting** McGraw-Edison Company. Halo Lighting Division,1983 *An Engine, Not a Camera* Donald MacKenzie,2008-08-29 In *An Engine Not a Camera* Donald MacKenzie argues that the emergence of modern economic theories of finance affected financial markets in fundamental ways These new Nobel Prize winning theories based on elegant mathematical models of markets were not simply external analyses but intrinsic parts of economic processes Paraphrasing Milton Friedman MacKenzie says that economic models are an engine of inquiry rather than a camera to reproduce empirical facts More than that the emergence of an authoritative theory of financial markets altered those markets fundamentally For example in 1970 there was almost no trading in financial derivatives such as futures By June of 2004 derivatives contracts totaling 273 trillion were outstanding worldwide MacKenzie suggests that this growth could never have happened without the development of theories that gave derivatives legitimacy and explained their complexities MacKenzie examines the role played by finance theory in the two most serious crises to hit the world s financial markets in recent years the stock market crash of 1987 and the market turmoil that engulfed the hedge fund Long Term Capital Management in 1998 He also looks at finance theory that is somewhat beyond the mainstream chaos theorist Benoit Mandelbrot s model of wild randomness MacKenzie s pioneering work in the social studies of finance will interest anyone who wants to understand how America s financial markets have grown into their current form **Sorting Things Out** Geoffrey C. Bowker,Susan Leigh Star,2000-08-25 A revealing and surprising look at how classification systems can shape both worldviews and social interactions What do a seventeenth century mortality table whose causes of death include fainted in a bath frightened and itch the identification of South Africans during apartheid as European Asian colored or black and the separation of machine from hand washables have in common All are examples of classification the scaffolding of information infrastructures In *Sorting Things Out* Geoffrey C Bowker and Susan Leigh Star explore the role of categories and standards in shaping the modern world In a clear and lively style they investigate a variety of classification systems including the International Classification of Diseases the Nursing Interventions Classification race classification under apartheid in South Africa and the classification of viruses and of tuberculosis The authors emphasize the role of invisibility in the process by which classification orders human interaction They examine how categories are made and kept invisible and how people can change this invisibility when necessary They also explore systems of classification as part of the built information environment Much as an urban historian would review highway permits and zoning decisions to tell a city s story the authors review archives of classification design to understand how decisions have been made *Sorting Things Out* has a moral agenda for each standard and category valorizes some point of view and silences another Standards and classifications produce advantage or suffering Jobs are made and lost some regions benefit at the expense of others How these choices are made and how we think about that process are at the moral and political core of this work The book is an important empirical source for understanding the building of information infrastructures *Technology and Culture* ,2002 Edison Electric
