Success and Failure in Israeli Elementary Education Abram Minkowich,Dan Deyáñis,Joseph Bashi, This book presents a comprehensive evaluation study of elementary education in Israel conducted over several years and completed in 1977 The study concentrates on Jewish schools but some data are presented from parallel studies in the Arab Schools A notable feature of the study is its unusually large scope both in size and content It sampled nearly ten percent of Jewish schools and fifteen percent of Arab schools The content includes a great variety of areas cultural origins home conditions and socialization patterns of pupils conditions and practices in schools teachers and principals backgrounds and their attitudes toward central issues in education pupils personality characteristics and motivations related to school experience their learning abilities and achievements in five major school subjects Special emphasis is given to the disadvantaged pupils and an examination of the problem of equality of educational opportunity This study's uniqueness lies in a novel approach in the measurement and analysis of scholastic achievements Like all studies in the psychometric tradition it places pupils in a position related to an advantaged pupil group But test construction and most data analyses were carried out by the criterion reference approach combined with a notion of master learning This enabled presentation of the absolute achievement level of a pupil or a pupil group vis à vis the optimal and minimal requirements of the curriculum and each school subject as well as for its various

content area This approach permits much more than the traditional methods utilization of results for deliberation and revision in educational policies This applies particularly to curriculum construction and methods of instruction It may also lead to a more appropriate definition of the disadvantaged pupil Five chapters of the study present a historical review and sociological analysis of the problems of Israeli education and deal with specific methodological considerations The twelve following chapters present detailed results and analysis for each topic of investigation **Data Mining and Decision Support** Dunja Mladenic,2003-09-30 Data mining deals with finding patterns in data that are by user definition interesting and valid It is an interdisciplinary area involving databases machine learning pattern recognition statistics visualization and others Decision support focuses on developing systems to help decision makers solve problems Decision support provides a selection of data analysis simulation visualization and modeling techniques and software tools such as decision support systems group decision support and mediation systems expert systems databases and data warehouses Independently data mining and decision support are well developed research areas but until now there has been no systematic attempt to integrate them Data Mining and Decision Support Integration and Collaboration written by leading researchers in the field presents a conceptual framework plus the methods and tools for integrating the two disciplines and for applying this technology to business problems in a collaborative setting **Statistical Methods for the Evaluation of Educational Services and Quality of Products** Paola Monari,Matilde Bini,Domenico Piccolo,Luigi Salmaso,2009-12-07 The book presents statistical methods and models that can usefully support the evaluation of educational services and quality of products The contributions collected in this book summarize the work of several researchers from the universities of Bologna Firenze Napoli and Padova The contributions are written with a consistent notation and a unified view and concern methodological advances developed mostly with reference to specific problems of evaluation using real data sets The evaluation of educational services as well as the analysis of judgements and preferences poses severe methodological challenges because of the presence of one or more of the following aspects the observational non experimental nature of the context which is associated with the well known problems of selection bias and presence of nuisance factors the hierarchical structure of the data that entails correlated observations and consideration of effects at different levels of the hierarchy and their interactions multilevel analysis the multivariate and qualitative nature of the dependent variable that requires the use of ad hoc statistical methodologies the presence of non observable factors e g the satisfaction calling for the use of latent variables models the simultaneous presence of components of pleasure and components of uncertainty in the explication of the judgments that asks for the specification and estimation of mixture models The first part of the book deals with latent variable models **The Sum of Feminine Achievement** William Alexander Newman Dorland,1917 **The Achievements of Four Centuries** Benson John Lossing,1892 **Machinery** Fred Herbert Colvin,Lester Gray French,1935
