Frontiers in the Acquisition of Literacy Claire M. Fletcher-Flinn,2015-09-28 Learning to read and to spell are two of
 the most important cultural skills that must be acquired by children and for that matter anyone learning a second language
 We are not born with an innate ability to read A reading system of mental representations that enables us to read must be
 formed in the brain Learning to read in alphabetic orthographies is the acquisition of such a system which links mental
 representations of visual symbols letters in print words with pre existing phonological sound and semantic comprehension
 cognitive systems for language Although spelling draws on the same representational knowledge base and is usually
 correlated with reading the acquisition processes involved are not quite the same Spelling requires the sequential production
 of letters in words and at beginning levels there may not be a full degree of integration of phonology with its representation
 by the orthography Reading on the other hand requires only the recognition of a word for pronunciation Hence spelling is
 more difficult than reading and learning to spell may necessitate more complete representations or more conscious access to
 them The learning processes that children use to acquire such cognitive systems in the brain and whether these same
 processes are universal across different languages and orthographies are central theoretical questions Most children learn to
 read and spell their language at the same time thus the coordination of these two facets of literacy acquisition needs
 explication as well as the effect of different teaching approaches on acquisition Lack of progress in either reading and or
 spelling is also a major issue of concern for parents and teachers necessitating a cross disciplinary approach to the problem
 encompassing major efforts from researchers in neuroscience cognitive science experimental psychology and education The
 purpose of this Research Topic is to summarize and review what has been accomplished so far and to further explore these
 general issues Contributions from different perspectives are welcomed and could include theoretical computational and
 empirical works that focus on the acquisition of literacy including cross orthographic research October 2019 Monthly
