**Slope Tectonics** Michel Jaboyedoff,2011 Usually geomorphology structural geology and  
engineering geology provide descriptions of slope instability in quite distinctive ways This new research is based on  
combined approaches to providing an integrated view of the operative slope processes Slope Tectonics is the term adopted  
here to refer to those deformations that are induced or fully controlled by the slope morphology and that generate features  
which can be compared to those created by tectonic activity Such deformation can be induced by the stress field in a slope  
which is mainly controlled by gravity topography and the geological setting created by the geodynamic context The content  
of this book includes slope deformation characterization using morphology and evolution mechanical behaviour of the  
material modes of failure and collapse influence of lithology and structural features and the role played by controlling factors  
The contributions cover broad aspects of slope tectonics that attempt to underline a multidisciplinary approach which should  
create a better framework for studies of slope instability
