## Interface Calculus:

Logic, Language, Information and Computation Hiroakira Ono, Makoto Kanazawa, Ruy de Queiroz, 2009-06-07 Edited in collaboration with FoLLI the Association of Logic Language and Information this book constitutes the 4th volume of the FoLLI LNAI subline containing the refereed proceedings of the 16h International Workshop on Logic Language Information and Computation WoLLIC 2009 held in Tokyo Japan in June 2009 The 25 revised full papers presented together with six tutorials and invited talks were carefully reviewed and selected from 57 submissions The papers cover some of the most active areas of research on the frontiers between computation logic and linguistics with particular interest in cross disciplinary topics Typical areas of interest are foundations of computing and programming novel computation models and paradigms broad notions of proof and belief formal methods in software and hardware development logical approach to natural language and reasoning logics of programs actions and resources foundational aspects of information organization search flow sharing and protection     Interface David A. Smith, 1984     **Interface Calculus** Smith, 1985-01-01     **Learn from the Masters!** Frank Swetz, 1995 This book is for high school and college teachers who want to know how they can use the history of mathematics as a pedagogical tool to help their students construct their own knowledge of mathematics Often a historical development of a particular topic is the best way to present a mathematical topic but teachers may not have the time to do the research needed to present the material This book provides its readers with historical ideas and insights which can be immediately applied in the classroom The book is divided into two sections the first on the use of history in high school mathematics and the second on its use in university mathematics The articles are diverse covering fields such as trigonometry mathematical modeling calculus linear algebra vector analysis and celestial mechanics Also included are articles of a somewhat philosophical nature which give general ideas on why history should be used in teaching and how it can be used in various special kinds of courses Each article contains a bibliography to guide the reader to further reading on the subject     *Tutorial--end User Facilities in the 1980's* James A. Larson, 1982 In the 1980 s new developments and commercial offerings will radically change the relationship of the computer and those who wish to use it The emphasis today is on the needs of the user on systems that are easier to learn easier to use more responsive and more solution oriented Modern end user facilities allow almost anyone to interact directly with the computer This book is intended for applications programmers and system analysts who design and implement systems for users who have no expertise in computing It describes trends and techniques that enable nonexperts to interact easily with computerized systems and use them to become more productive The papers appearing here were selected because they are the best available descriptions of what end user facilities will be like for the remainder of this decade     MAA Notes , 1983     *Subject Catalog* Library of Congress, 1976     **The American Mathematical Monthly** , 1978 Includes articles as well as notes and other features about mathematics and the profession     **Convergence, Approximation, and Differential Equations** Eugene A. Herman, 1986

A new approach to the teaching of undergraduate level mathematics that includes topics from numerical analysis calculus and differential equations It stresses a modern viewpoint combining both computational and theoretical aspects that will help students use the computer as a daily tool as well as aid them in the understanding of basic theoretical concepts Numerous examples applications and exercise sets are also included in the text
