Iterations Of Differential Operators:

Iterations of Differential Operators A. V. Babin, 1989 Translated from the Russian by H Zahavi Topics covered include the activity of linear and nonlinear differential operators the related theories of functions and operators and the connections between the theory of functions and partial differential equations The author focuses on new methods of constructing solutions for partial differential equations and looks at research into the smoothness of these solutions Formulae theorems and lemmas are numbered independently for quick reference and the detailed listing of the subjects covered in each chapter enables the reader to find a particular area of interest without difficulty Annotation copyrighted by Book News Inc Portland OR

Space Walter Mead Patterson, 1974-07-22 In this expository work we shall conduct a survey of iterative techniques for solving the linear operator equations $Ax = y$ in a Hilbert space Whenever convenient these iterative schemes are given in the context of a complex Hilbert space Chapter II is devoted to those methods three in all which are given only for real Hilbert space Thus chapter III covers those methods which are valid in a complex Hilbert space except for the two methods which are singled out for special attention in the last two chapters Specifically the method of successive approximations is covered in Chapter IV and Chapter V consists of a discussion of gradient methods While examining these techniques our primary concern will be with the convergence of the sequence of approximate solutions However we shall often look at estimates of the error and the speed of convergence of a method *Solving Upwind-Biased Discretizations: Defect-Correction Iterations*
