**Sleep Disorders** Sue Wilson, David Nutt, 2013-09-26. Sleep dysfunction is one of the primary symptoms reported by patients with psychiatric disorders and specifically those suffering from anxiety and depressive disorders. Conversely primary insomnia and other sleep disorders produce symptoms of mood disturbance that are quite similar to those reported by patients with psychiatric disorders. Because of this overlap in the symptoms and treatments for insomnias and psychiatric disorders it is important for clinicians to be able to accurately identify the root cause of sleep dysfunction in individual patients in order to optimize treatment. Part of the Oxford Psychiatry Library series, Sleep Disorders provides clinicians with an overview of current understanding of sleep physiology, the pathophysiology of sleep disturbance and the diagnosis and treatment of sleep disorders. This second edition includes new sections covering sleep problems in children, sleep in the elderly and sleep in pregnancy and menopause as well as new algorithms from the British Association of Psychopharmacology's BAP's new Consensus Guidelines on the management of sleep disorders.

**Sleep Disorders Handbook** Peretz Lavie, Giora Pillar, Atul Malhotra, 2002-06-27. Recent years have seen the rapid development of sleep medicine as a new medical subspecialty. It is estimated that at least 30% of the adult population suffer at least once from some sort of sleep disturbance. Patients with sleep disorders are frequently among the most difficult to treat and account for a high percentage of absenteeism in the workplace.

**Sleep and its Disorders in Children and Adolescents with a Neurodevelopmental Disorder** Gregory Stores, 2014-10-27. Sleep disorders are common in children and adolescents with neurodevelopmental disorders, exacerbating behavioural problems and hindering overall care. Based on a review of published evidence and a wealth of clinical experience this book provides paediatricians, paediatric neurologists, specialists in intellectual disability, psychiatrists, psychologists and primary care staff with practical guidance for the investigation and management of these disorders. The book outlines sleep and its disorders in children and adolescents before discussing special considerations in children with a neurodevelopmental disorder. The next section reviews comorbid conditions that contribute to sleep disturbances including intellectual disability, epilepsy, sleep related breathing disorders, sensory deficits, psychiatric disorders and parenting difficulties. The remainder of the book gives accounts of the sleep disturbance aspects of various neurodevelopmental disorders. Each disorder is considered separately focussing on the need for a comprehensive, co-ordinated multidisciplinary approach to assessment and treatment. Emphasis throughout is placed on

aspects of practical clinical importance
