**Concepts, Techniques, and Models of Computer Programming** Peter Van Roy, Seif Haridi, 2004-02-20 Teaching the science and the technology of programming as a unified discipline that shows the deep relationships between programming paradigms This innovative text presents computer programming as a unified discipline in a way that is both practical and scientifically sound The book focuses on techniques of lasting value and explains them precisely in terms of a simple abstract machine The book presents all major programming paradigms in a uniform framework that shows their deep relationships and how and where to use them together After an introduction to programming concepts the book presents both well known and lesser known computation models programming paradigms Each model has its own set of techniques and each is included on the basis of its usefulness in practice The general models include declarative programming declarative concurrency message passing concurrency explicit state object oriented programming shared state concurrency and relational programming Specialized models include graphical user interface programming distributed programming and constraint programming Each model is based on its kernel language a simple core language that consists of a small number of programmer significant elements The kernel languages are introduced progressively adding concepts one by one thus showing the deep relationships between different models The kernel languages are defined precisely in terms of a simple abstract machine Because a wide variety of languages and programming paradigms can be modeled by a small set of closely related kernel languages this approach allows programmer and student to grasp the underlying unity of programming The book has many program fragments and exercises all of which can be run on the Mozart Programming System an Open Source software package that features an interactive incremental development environment

**Prolog: The Next 50 Years** David S. Warren, Veronica Dahl, Thomas Eiter, Manuel V. Hermenegildo, Robert Kowalski, Francesca Rossi, 2023-06-16 This volume was motivated by the Year of Prolog initiative launched to celebrate the 50th anniversary of the emergence of Prolog through the work of Alain Colmerauer's team in Marseille The volume editors authors and scientific advisors and reviewers have been the leading researchers and programmers in this field over decades and the book represents an excellent overview of the field its successes and its future After a first chapter that gently introduces the Prolog programming language using examples the next 7 papers discuss general views of the language possible extensions for the future and how Prolog can generally be used to solve problems the next 5 papers explore ideas and experiences of teaching Prolog programming and then 2 papers discuss technology that has been developed for help in that teaching the next 3 papers describe new languages based on Prolog which show future directions for logic programming the next 5

chapters explain the applications that were the finalists for the 2022 Alain Colmerauer Prize and the final 8 papers describe applications developed using the Prolog language demonstrating the language's range

Novice Programming Environments Marc Eisenstadt, Mark Keane, Tim Rajan, 2018-05-15 This book originally published in 1992 encapsulates ten years of research at the Open University's Human Cognition Research Laboratory. The research investigates the problems of novice programmers and is strongly oriented toward the design and implementation of programming environments aimed at eliminating or easing novices' problems. A range of languages is studied: Pascal, SOLO, Lisp, Prolog, and Knowledge Engineering Programming. The primary emphasis of the empirical studies is to gain some understanding of novices' mental models of the inner workings of computers. Such erroneous models are constructed by novices in their own heads to account for the idiosyncrasies of particular programming languages. The primary emphasis of the implementations described in the book is the provision of automatic debugging aids, i.e., artificial intelligence programs which can analyse novices' buggy programs and make sense of them, thereby providing useful advice for the novices. Another related strand taken in some of the work is the concept of pre-emptive design, i.e., the provision of tools such as syntax-directed editors and graphical tracers which help programmers avoid many frequently occurring errors. A common thread throughout the book is its Cognitive Science / Artificial Intelligence orientation. AI tools are used, for instance, to construct simulation models of subjects writing programs in order to provide insights into what their deep conceptual errors are. At the other extreme, AI programs which were developed in order to help students debug their programs are observed empirically in order to ensure that they provide facilities actually needed by real programmers. This book will be of great interest to advanced undergraduate, postgraduate, and professional researchers in Cognitive Science, Artificial Intelligence, and Human-Computer Interaction.

Practical Aspects of Declarative Languages Gopal Gupta, 2003-05-20 Declarative languages have traditionally been regarded by the mainstream computing community as too impractical to be put to practical use. At the same time, traditional conferences devoted to declarative languages do not have issues related to practice as their central focus. Thus, there are few forums devoted to discussion of practical aspects and implications of newly discovered results and techniques related to declarative languages. The goal of the First International Workshop on Practical Aspects of Declarative Languages (PADL) is to bring together researchers, practitioners, and implementors of declarative languages to discuss practical issues and practical implications of their research results. The workshop was held in San Antonio, Texas, during January 18-19, 1999. This volume contains its proceedings. Fifty-three papers were submitted in response to the call for papers. These papers were written by authors belonging to twenty-one countries from six continents. Each paper was assigned to at least two referees for reviewing. Twenty-four papers were finally selected for presentation at the workshop. Many good papers could not be included due to the limited duration of the workshop. The workshop included invited talks by Mark Hayden of DEC Compaq Systems Research Center speaking on Experiences Building Distributed Systems in ML and Mark Wallace of Imperial College Center for

Planning And Resource Control IC PARC speaking on ECLiPSe Declarative Specification and Scalable Implementation
