The Menstrual Cycle:

The Menstrual Cycle Anne Walker, 2008-03-07 Anne Walker shows that women are neither the victims of raging hormonal fluctuations nor entirely unaffected by them Unlike most previous publications that focus on menstruation a part of the cycle **The Menstrual Cycle** presents a well researched study of the entire menstrual cycle and its relationship to women's lives Women's own experiences in different cultures are contrasted with medical textbook descriptions and the normal is found to be rather elusive This book will be read by discourse analysts doctors nurses and any woman who has felt curious about her menstrual cycle and its possible effects

The Menstrual Cycle Michel Ferin, Raphael Jewelewicz, Michelle P. Warren, 1993 This volume clarifies in a logical and didactic manner the sequence of events that characterize the human menstrual cycle Each major organ involved in the cycle the brain the pituitary gland the ovary and the uterus is discussed and its contribution specifically outlined The chapters trace the physiologic events within each of these organs describe the hormones by which they communicate and outline how critical aspects of the cycle are synchronized so that an ovulatory cycle can occur Thus neuroendocrine control of the menstrual cycle is examined in detail and the processes of follicular development maturation ovulation and maintenance of the corpus luteum are thoroughly covered The book then turns to pathophysiology and examines the conditions under which the menstrual cycle may become abnormal Pathophysiological mechanisms that cause cycle disturbance anovulation and infertility are reviewed as are clinical presentations of common menstrual disorders and their treatment Progress in reproductive biology has been rapid and the research spans several disciplines In this volume information dispersed in many publications has been synthesized and concisely presented providing an in depth understanding of the processes that control reproductive function in the female

The Menstrual Cycle Anne E. Walker, 1997 Presents a well researched study of the entire menstrual cycle and its relationship to women's lives

Cognition and the Menstrual Cycle John T.E. Richardson, 2012-12-06 This book originated in a symposium that was held at the London Conference of the British Psychological Society BPS in December 1988 The fact that the various contributors were able to assemble at all was very much due to the kind generosity of the Scientific Affairs Board of the BPS which had made resources available from its Initiatives Fund to enable Barbara Sommer to travel to the United Kingdom to participate in the event The broad continuity among the contributions to this symposium in terms of their underlying themes led us to the view that a single volume consisting of original papers by those concerned would be a timely contribution to the research literature not simply on menstruation and cognitive performance but more generally on the nature of female psychology This was confirmed by a clear sense that in their different ways the individual researchers involved were achieving genuine conceptual theoretical and empirical progress in this area and were generating ideas and findings that accorded well with changing views of women in psychology and cognate disciplines We hope that the various chapters in this book convey some sense of this intellectual progress and development

Osborne, 2025-02-25 Menstrual cycle related exacerbations of psychiatric illnesses and premenstrual disorders are prevalent and associated with significant morbidity While menstrual cycle related exacerbations are common and for certain disorders have been associated with severity and with poorer treatment response the field remains largely understudied We currently know little about the specific patterns of exacerbation for most psychiatric illnesses and how to treat them Premenstrual disorders have gained more attention in research however many women do not respond to the currently available treatments and novel pharmacotherapies are needed This Research Topic aims to further our knowledge and recognition of both menstrual cycle related exacerbations and of psychiatric illnesses limited to certain phases of the menstrual cycle Research is needed on prevalence patterns across the menstrual cycle and the characteristics pathophysiology and treatment of these menstrual cycle related conditions
