The Militarisation Of Space

Thomas Hoerber,Iraklis Oikonomou

The Militarisation Of Space:

The Militarization and Weaponization of Space Matthew Mowthorpe, 2004-01-01 The militarization of space began as a rivalry between the United States and the Soviet Union and grew to enormous proportions during the height of the Cold War Satellite reconnaissance navigation and weapons guidance and electronic intelligence comprise only a few of the efforts taken to militarize and dominate space Today as the prominence of information technology computing and telecommunications advances so does the concept of space as a battlefield In The Militarization and Weaponization of Space Matthew Mowthorpe diligently analyzes the military space policies of the United States the Soviet Union Russia and the People's Republic of China from the Cold War period to the present day Mowthorpe focuses on the development of the ballistic missile defense and other anti satellite systems and aptly assesses to what degree space will become armed This work cogently addresses an issue of increasing urgency to scholars of international politics

The Militarisation of Space Stephen Kirby, 1987 Militarisation of Space Kaza Lalitendra, 2010 The first three chapters of the book examines the evolution of space for military use the study of the legal framework governing the use of outer space that has enabled the militarisation of space and the complexities of defining the fine line that separates militarisation and weaponisation of space Chapter Four and Five provide an in depth coverage on the military space capabilities of China and select Asian countries Chapter Six highlights India's civilian space capabilities It argues that notwithstanding the complex regional geo political and geo strategic environment India has shown restraint in its space programme for military purposes Chapter Seven examines the exploitation of near space as a transformational medium that has the potential to change the war fighting capabilities of nations Chapter Eight illustrates the intricate relationship between missile defence and space The concluding chapter draws out the likely scenarios in the future uses of outer space in the context of various political technical and military challenges that may hamper India's march towards exploration and exploitation of outer space for its national development and security The book will be of immense value to graduate students of Defence and Strategic Studies as well as serving officers in defence establishments

The Militarization of European Space Policy Thomas Hoerber, Iraklis Oikonomou, 2023-10-30 This book is focused on militarization as the nucleus of EU space policy and the interrelatedness of European security industrial competitiveness and military capabilities in the shaping of this policy The EU and key member states have increasingly joined the US China and Russia among others in regarding space assets as critical military as well as economic industrial and technological enablers This book tackles this issue by first shedding light on the military aspects of EU space policy with special emphasis on the security and defence dimensions of projects such as Galileo Copernicus Space Situational Awareness and Satellite Communication In this context contributors confront the empirical aspect of developments including the role of different institutional actors and the involvement of specific member states Further the volume analyses the discursive ideological normative and theoretical foundations of the use of space by the EU for strategic purposes drawing on the broad

spectrum of European integration International Relations theory Last but not least the volume discusses initiatives outside the EU by key global space players with an emphasis on the US and transatlantic space relations All chapters maintain a solid empirical foundation in the form of geographical or issue related focus with an area specific emphasis on the EU as a whole transatlantic relations the policies of key member states such as France and Italy and core space powers such as the US China and India This book will be of much interest to students of space power security studies European politics and International Relations

The Contemporary Review, 1985 *Space Strategy and Military Doctrine* Bert Chapman, 2025-07-24 Examining open access civilian and military space policy strategy and doctrine documents this book highlights emerging trends and developments in military space strategy Bert Chapman collects public documents from Australia Canada the European Union NATO the United States and the United Kingdom from 2017 onward to illustrate space's critical importance to national and international security and to multiple areas of civilian economic and personal use including climate change food security personal and global communications and the potential for expanded space exploration In light of recent revelations that Russia may be capable and desirous of exploding nuclear weapons in space to damage civilian and military space based infrastructures of the U S and other countries and China's increasing space assertiveness and capabilities it is more important than ever that civilian readers have the access and background knowledge necessary to parse publicly available documents relating to space strategy so that they may effectively participate in the legislative and regulatory policymaking processes of their governments

The Militarization of Space Paul B. Stares, 1985 From the front jacket flap Contrary to widespread expectations in the wake of Sputnik outer space did not immediately become a new arena for a superpower arms competition Although the United States and the Soviet Union began to use space extensively for military purposes both exhibited relatively little interest in the development of space weaponry By the beginning of the 1980s however an arms race in space seemed inevitable Now both the United States and the Soviet Union have developed the means to disable satellites and are now also considering the deployment of ballistic missile defenses in space Why were these weapons never extensively developed earlier What changed in the late 1970s to reverse the predominant trend in the militarization of space What are the lessons for arms control and for Soviet American relations in general Paul Stares addresses these fundamental questions by examining the factors that have shaped United States policy towards the military use of space and in particular the development of antisatellite weapons States relies heavily on declassified documents found in Presidential libraries and made available under the Freedom of Information Act and he obtained additional information from a comprehensive series of interview with former members of the U S government and armed services By judicious use of this material he provides the first detailed account of United States space weapons policy and programs An invaluable source of information for defense analysts and scholars of international relations The Militarization of Space is essential reading for anyone wishing to understand present United States military space policy and its implications for the future
