How to Teach Economics Yousuf Hamid,2022-03-25

Economics teachers often work by themselves or in small departments This can mean they are forced to plan a lot of lessons from scratch with limited scope for shared planning or collaboration Even as teaching becomes more research informed there is still the problem of having to work out how this best applies when teaching Economics especially when there has been limited training in this This can mean teachers are forced to adopt a trial and error approach attempting to implement generic teaching and learning tips into economics lessons Teachers plan each explanation individually only learning what common misconceptions are through the painstaking experience of seeing puzzled expressions on multiple pupils faces over the years This book aims to change that By looking at what the latest cognitive science research tells us about how pupils learn and crucially how that can be implemented in economics lessons this book provides a short cut to that trial and error approach While the book summarises what the research tells us about pupil learning this is fundamentally a doing book It is packed with practical examples of how research can be implemented in Economics lessons looking at explanations misconceptions assessment curriculum and much more

**An International Perspective on Economic Education** William B. Walstad, 1994-01-31

Economics is taught in some form in the secondary schools of nations throughout the world The subject is rarely taught in elementary schools and while economics courses are offered in universities the majority of students end their formal education with secondary school Thus the best opportunity for the economic education of the youth of a nation occurs in secondary schools This book examines economic education at this critical level of the educational system The teaching of economics in secondary schools varies across countries These differences occur because of history the structure of education and other national factors At the same time there are common elements in the economic education of many countries especially in content coverage This contrast between the common features and the uniqueness of economic education in secondary schools of major industrial nations exemplifies the international perspective presented in this book The international perspective is developed in the six sections of the volume The first section discusses why nations should include economics in school curricula and presents a framework for teaching economics that should have global appeal Dissension and consensus on economic issues among North American and European economists are examined in the second section The third section surveys the U.S. research literature on precollege economic education and assesses the current state of economics instruction in U.S. schools The economics curricula and educational practices in seven other nations the U.K. Canada Japan Germany Austria Korea and Australia are described in the fourth and fifth sections The fifth section also presents international comparisons of economic understanding based on national testing in six of those nations The sixth and final section explores the role of economic education in centrally planned economies and its effects on the transition to a market economy using Russia Bulgaria and China as case studies
