Technique Systems In Chiropractic:

Technique Systems in Chiropractic Robert Cooperstein, 2018-01-12 *Technique Systems in Chiropractic* describes and analyses the most common techniques in today's chiropractic. These techniques, sometimes called brand name or proprietary techniques, each provide a step by step protocol for proceeding from examination findings to adjustive and other treatment procedures. Until now, the most readily available descriptions of these techniques have taken the form of articles and seminar advertisements written and distributed by the technique innovators themselves. Major chiropractic technique textbooks frequently list these techniques and some provide synopses, but they do not include the detail really required for readers to come to any serious conclusions about their safety and efficacy. In *Technique Systems in Chiropractic*, the authors describe over two dozen technique systems in a non-judgmental but critical manner, summarizing the available research and drawing conclusions as to what is actually known about them compared with what the technique innovators themselves say.

KEY FEATURES Describes and analyses over two dozen of the most widely known and used chiropractic technique systems in alphabetical order. Uses a common format for each technique system, allowing the reader to easily locate desired information and draws comparisons between techniques. Features chapters on chiropractic terminology as well as examination and adjustive methods that are common to many technique systems. Compiles and summarizes the relevant research on each technique, drawing summary conclusions and clearly identifying what is known and what is not known about each. Explains why there have been so many technique systems in chiropractic past and present as this relates to issues of jurisprudence, practice parameters and guidelines for care. Explores the interface between chiropractic technique systems and the movement toward evidence-based chiropractic. EBC Presents demographic information on the rates of utilization of each technique in Canada and the United States. Includes a glossary of technique-specific terms and jargon. *Technique Systems in Chiropractic* provides a comprehensive state-of-the-art resource on the different technique systems in common use by chiropractors throughout the world. It will provide students and practitioners of chiropractic with the easy access they need to enrich their knowledge of the vast array of chiropractic technique procedures, whether to whet their interest in pursuing further training in given technique systems or to incorporate various of these procedures into the more generic eclectic practice or chiropractic to which many practitioners seem to be drawn at this time. Insurance claims adjusters, attorneys, managed health care and government administrators, students and instructors in allied health professions, individual interested in complementary and alternative medicine (CAM) and of course current and prospective chiropractic patients will also find this book of great interest.

Manipulative Therapy in Rehabilitation of the Locomotor System Karel Lewit, 1991 This book is the updated English version not a mere translation of a textbook which appeared successively in Czech in German in Bulgarian in Dutch and in Polish This English version is shorter more concise and includes the latest techniques The role of manipulation is limited to passive mobility and an important part of this book deals with active mobility The author emphasizes that this is a textbook and not a manual of techniques the latter deals with individual techniques while his purpose is to show that it can be disastrous to confine one's interest in this manner and to remain unaware of both the broader context of treatment and of the possible alternatives There are chapters on functional anatomy the diagnosis and treatment of disturbed locomotor system function including indications of appropriate treatment and the place of manipulation and finally a long chapter on the clinical aspects of impaired function of the locomotor system The book begins by discussing the major role played by impaired function in the vast majority of patients suffering from pain arising in the locomotor system This type of pain is altogether the most frequent from which patients suffer and the first two chapters of this book are mainly concerned with the origin of this pain It is traditionally associated with rheumatism but unfortunately rheumatologists are insufficiently aware of locomotor function and leave this field largely to neurologists and orthopaedic surgeons The author believes that the speciality which is principally concerned with impaired function and its restoration to normal is rehabilitation medicine a term which includes physical therapy and it is in this framework that the future of manipulation lies This will continue to be the case until one day a new speciality is established one which deals with the whole of the locomotor system and in particular with its function Ideally it should be called Musculo skeletal Medicine **Top 100 Computer and Technical Careers** J.
