William R. Leo, 1987 This book is an outgrowth of an advanced laboratory course in experimental nuclear and particle physics the author gave to physics majors at the University 1978 1983 The course was offered to third and fourth year students during the years the latter of which had at this point in their studies chosen to specialize in experimental nuclear or particle physics This implied that they would go on to do a diplome thesis with one of the high or intermediate energy research groups in the physics department The format of the course was such that the students were required to concentrate on only one experiment during the trimester rather than perform a series of experiments as is more typical of a traditional course of this type Their tasks thus included planning the experiment learning the relevant techniques setting up and troubleshooting the measuring apparatus calibration data taking and analysis as well as responsibility for maintaining their equipment i e tasks resembling those in a real experiment This more intensive involvement provided the students with a better understanding of the experimental problems encountered in a professional experiment and helped instill a certain independence and confidence which would prepare them for entry into a research group in the department Teaching assistants were present to help the students during the trimester and a series of weekly lectures was also given on various topics in experimental nuclear and particle physics

*Techniques For Nuclear And Particle Physics Experiments: A How-To Approach*, 2Nd Ed Leo, 2009-11-01 [Radiation Sensors with 3D Electrodes](#) Cinzia Da Vià, Gian-Franco Dalla Betta, Sherwood Parker, 2019-01-17 Written by the leading names in this field this book introduces the technical properties design and fabrication details measurement results and applications of three dimensional silicon radiation sensors Such devices are currently used in the ATLAS experiment at the European Centre for Particle Physics CERN for particle tracking in high energy physics These sensors are the radiation hardest devices ever fabricated and have applications in ground breaking research in neutron detection medical dosimetry and space technologies and more Chapters explore the essential features of silicon particle detectors interactions of radiation with matter radiation damage effects and micro fabrication in addition to a providing historical overview of the field This book will be a key reference for students and researchers working with sensor technologies Features The first book dedicated to this unique and growing subject area which is also widely applicable in high energy physics medical physics space science and beyond Authored by Sherwood Parker the inventor of the concept of 3D detectors Cinzia Da Vià who has brought 3DSi technology to application and Gian Franco Dalla Betta a leading figure in the design and fabrication technology of these devices Explains to non experts the
