Abstract: The article carries out teaching reform in the aspects of teaching content, teaching methods and means, teaching mode, and moral education of the motor course, re-integrates the educational resources of the electrical control technology course, reconstructs the content of subject knowledge, integrates the craftsman spirit of "dedication, lean, focus, innovation" and the industry values of "safety, standardization, pragmatism, efficiency", and carries out a "theory-practice integration" teaching practice that combines online and offline teaching with ideological and political education as the leading factor, simulation experiment design as the main line, classroom theoretical explanation as the auxiliary line, and practical operation as the strengthening factor. It ensures the integration of value shaping, knowledge impartment, and ability cultivation, and implements the goal of cultivating morality and fostering talents.

Keywords: Ideological and Political Education, Online and Offline, Simulation, Integration of Theory and Reality.

1. Introduction

Motor and Electrical Control Technology is an important foundational course for majors such as mechatronics, electrical engineering, and automation [1-2]. The content includes DC motors, transformers, three-phase asynchronous motors, commonly used low-voltage electrical appliances, electrical control circuits of three-phase asynchronous motors, typical machine tool control circuits, etc [3]. This course is closely related to practical applications and is widely used in the electromechanical industry. It has strong theoretical basis and many abstract concepts. Circuit analysis and working principle analysis sometimes require appropriate approximation processing [4]. However, due to the lack of practical experience among students, some of them may have a vague understanding of the theoretical analysis and practical application of the course, which is a problem that we need to explore and solve; The reform of the integrated teaching model of theory and practice must break the traditional disciplinary system, use projects as carriers, integrate the cultivation of knowledge, skills, and literacy, and enable theoretical learning and professional practice to be completed in the same time and space. At the same time, information technology teaching should be integrated to improve the quality of talent cultivation [5]. In addition, vocational colleges aim to cultivate students with professional skills, so they need to experience more practical work scenarios during the learning process. Traditional practical training is difficult to provide more practical environments, so corresponding electrical simulation software can be introduced into different work scenarios, in which students practice the operational skills required for different positions. At the same time, cultivate students' engineering awareness (including safety production awareness, quality awareness, and economic awareness) and labor awareness; Cultivate students' teamwork ability, a rigorous and pragmatic scientific attitude, and a spirit of craftsmanship that strives for excellence;

Cultivate the ability of students to acquire relevant knowledge and information by reading product manuals and collecting information online; Cultivate good study habits and lifelong learning concepts among students, achieve self-management learning, and lay the foundation for sustainable development [6].

Based on my practical teaching experience in the motor course, the author carried out teaching reform from the aspects of teaching content, teaching methods and means, teaching mode, moral education teaching, etc., to help students better master the theoretical knowledge of the course and improve their practical ability. At the same time, focusing on the six aspects of firming ideals and beliefs, cultivating patriotism, strengthening moral cultivation, increasing knowledge and insight, cultivating the spirit of struggle, and enhancing comprehensive quality, the author integrated the craftsman spirit of "dedication, lean, focus, and innovation" and the industry values of "safety, specification, pragmatism, and efficiency" into the whole process of teaching construction, focusing on shaping the values of patriotism, honesty, friendliness, safety standards, lean and pragmatic, innovation and efficiency, so that students can accurately design control schemes, precise operations, and parameters. Set up and carefully develop control procedures. Fine debugging of control circuits, lean and pragmatic solutions to enterprise problems, and becoming a technical and skilled talent with the characteristics of "precise control, pragmatism and efficiency creation" in the field of control integration.

2. Thoughts on Curriculum Teaching Reform

By integrating the education and teaching resources of the electrical control technology course, according to the guiding ideology of "Cognition Simulation Practice re cognition re practice", integrating the elements of Ideological and political education, re designing the teaching, re arranging and
