Friend v. Friend Ethan J. Leib, 2011-01-07 Friendship is one of our most important social institutions. It is not only the salve for personal loneliness and isolation; it is the glue that binds society together. Yet for a host of reasons—longer hours at work, the Internet, suburban sprawl—many have argued that friendship is on the decline in contemporary America. In social surveys, researchers have found that Americans on average have fewer friends today than in times past. In *Friend v. Friend*, Ethan J. Leib takes stock of this most ancient of social institutions and its ongoing transformations and contends that it could benefit from better and more sensitive public policies. Leib shows that the law has not kept up with changes in our society; it sanctifies traditional family structures but has no thoughtful approach to other aspects of our private lives. Leib contrasts our excessive legal sensitivity to marriage and families with the lack of legal attention to friendship and shows why more legal attention to friendship could actually improve our public institutions and our civil society. He offers a number of practical proposals that can support new patterns of interpersonal affinity without making friendship an onerous legal burden. An elegantly written and highly original account of the changing nature of friendship, *Friend v. Friend* upends the conventional wisdom that law and friendship are inimical and shows how we can strengthen both by seeing them as mutually reinforcing.

Seasonal to Decadal Prediction of Marine Ecosystems: Opportunities, Approaches, and Applications Mark R.

Payne, Alistair J. Hobday, Brian R. MacKenzie, Desiree Tommasi, 2019-06-28 Tremendous advances in oceanographic observing and modeling systems over the last decade have led to unprecedented developments in the nature of information available to marine science While improvements in observational technologies and networks have garnered much attention remarkable developments in forecasting the ocean have received much less focus Exploiting this new predictive skill to improve scientific understanding generate advice and aid in the management of marine resources is emerging as one of the new challenges of marine science Translating predictions of the physical environment into biological outcomes however is not straightforward Fisheries scientists for example have been trying to understand the links between physics and biology and generate predictions of variables such as recruitment for close to a century with limited success Nevertheless spatial distributions and

the timing of key events which have received less focus are often tightly linked to the physical environment and may have management relevant applications The first such forecasts based on this skill are now starting to emerge This *Frontiers in Marine Science* Research Topic provides a snapshot of the state of the art in Marine Ecological Prediction It covers the opportunities for developing such forecasts technical approaches that could be employed and examples where the technology is already being applied This body of work therefore marks an important milestone on the route to developing this new and exciting field of marine science
