Statistics For Managers:

Statistics for Management Richard I. Levin, 2008-12 Statistics For Management is a textbook of business statistics that helps students grasp the fundamentals of the subject in a simple and easy manner. Statistics For Management is a detailed textbook on the subject of business statistics. It seeks to dispel the seeming complexity of the subject by presenting the concepts in a lucid and visually demonstrative manner. The book begins with an overview of business statistics. Subsequent chapters cover topics like tables and graphs, probability, sampling, estimation, testing hypotheses, and quality and quality control. The last few chapters present concepts like chi square analysis, variance, simple regression, and multiple regression, non parametric methods, time series, and forecasting, and index numbers. The book ends with a chapter on decision theory. The concepts in the book are explained at length and illustrative explanations are given precedence over complex mathematical notations. Also, each discussion is accompanied by examples that demonstrate one or more real world applications of the concepts. All the hypothesis tests are conducted using the standardized scale. Every section ends with three types of exercises for practice: self-evaluative, basic, and application exercises. A very useful feature of the book is the Hints And Assumptions feature, which provides useful hints for solving the exercise problems and alerts the students about the commonly committed mistakes while solving them. Statistics For Management was published in 2011 by Pearson.

Students need access to statistical methods to support work in non-statistics courses, case studies, and projects. What is needed will depend on the demands of the problem and how much statistics the manager or student already knows. The requirement is for flexible decision support. This unique book presents statistical ideas and models in easily accessible form, describing both

methods and issues of application statsNotes are organized as a set of over one hundred notes rather than as a number of chapters This enables managers and students to locate just what they need for the problem they have Each note consists of a description of what to do an example the rationale links to other notes Managers and students can choose to use as many notes as necessary which might be just one note or a set of linked notes Deciding which method will be helpful depends not just on finding an appropriate statistical method but on the business context too statsNotes provide advice at three levels Business fit problems from a business viewpoint and how some statistics might help Perspectives discussion of issues with widespread implications Implementation how to use a model or method While the range of topics covered is similar to those in introductory textbooks and courses the focus is on management decision and the methods for dealing with risky decisions and management judgment in this book are usually found in more specialist texts
