Improvement of Oil-seed and Industrial Crops by Induced Mutations ; Proceedings Vienna Advisory Group Meeting on the Use of Induced Mutations for the Improvemnt of Oil-Seed and other Industrial Crops (17-21 Novembr, 1980),1982

**Improvement of Oil-seed and Industrial Crops by Induced Mutations** ,1982      **Improvement of Oil-seed and Industrial Crops by Induced Mutations** International Atomic Energy Agency,Food and Agriculture Organization of the United Nations,1982      **Industrial Crops Improvement** Nitish Kumar,2025-01-24 This book explores the different conventional and biotechnological techniques for enhancing the productivity of industrial crops The growth of the industrial crop sector has become a widespread global phenomenon that helps rural livelihoods and propels economic development Contrary to staple crops industrial crops are cultivated with the intention of being sold for a high profit Industrial crops are a crucial component of plans to increase food security because they offer the required stability during periods of economic or climatic crises In order to maintain their livelihood and food security many farm households balance the advantages and disadvantages of producing food crops and industrial crops Avoiding land use rivalry with crops grown for food and feed production is crucial when considering growing industrial crops on agricultural soils The past several years have seen a rise in the awareness of scholars and decision makers regarding the immediate and long term effects of climatic variables on economic food security social and political results In order to sustain food production with more climate resilient crops for future generations genetic variety both natural and artificial is crucial Therefore addressing the problem of finding a compromise between increasing crop production under a specific set of conditions and reducing the chance of crop failure

when conditions change is important and difficult. An assortment of meteorological conditions is used to grow industrial crops. Many are subsistence farmers who run extremely tiny farms with very little agricultural input to produce products that can be sold. It is a significant problem to preserve the variety of these crops and handle all crop culture related difficulties. By offering the knowledge required to minimize the dangers of industrial crop breeding through managing genetic diversity, the author believes that this book will primarily address a need that has not yet been met in this and other grower groups.

*Biochemical Aspects of Crop Improvement* K. R. Khanna, 2024-12-06. This book provides a comprehensive review at the biochemical and molecular level of the processes and techniques that contribute to crop improvement. General topics include a historical perspective of the advancements in crop improvement, cultivar systematics and biochemical and molecular markers in crop improvement programs, the genetics of physiological and biochemical processes affecting crop yield, the genetics of photosynthesis, chloroplast relevant enzymes and mutations, osmoregulation adjustment and the production of protective compounds in relation to drought tolerance and the biochemistry of disease resistance including elicitors, defense response genes, their role in the production of phytoalexins and other strategies against pathogens. Other topics include quality breeding, e.g. molecular gene structure, changing individual amino acids, enhancing nutritive value of proteins and biotechnology, genetic engineering. Geneticists, biochemists, botanists, agricultural specialists and others involved in crop improvement and breeding should consider this volume essential reading.
