## **Read My Mind Teaching To How Students Learn:**

**Read my Mind** Fred Sedgwick, 2002-11-01 In this Sedgwick's latest book he aims to help all those involved with children and their learning through poem writing improve their practice. He argues that through poetry children can learn about the whole curriculum including history and science. The book begins with an introduction outlining the importance of poetry and defining it. It discusses poetry in terms of children's learning and the imagination. Case studies are used to show how children learn about themselves first their bodies and second their thoughts and emotions through the writing of poetry. Using many examples of children's work he considers how children learn about their environment and the relationship between themselves and their environment. Finally he discusses his techniques for getting children to write and provides recommendations for further reading. Fred Sedgwick is a freelance lecturer and writer specialising in children's writing art and personal social and moral education and has been described as the nearest thing I've seen to the Pied Piper. Previously a headteacher in primary schools for 16 years he has published books of poetry for both children and adults. **Teach**

**Students How to Learn** Sandra Yancy McGuire, 2023-07-03 Co published with NISOD Miriam a freshman Calculus student at Louisiana State University made 37.5% on her first exam but 83% and 93% on the next two. Matt a first year General Chemistry student at the University of Utah scored 65% and 55% on his first two exams and 95% on his third. These are representative of thousands of students who decisively improved their grades by acting on the advice described in this book. What is preventing your students from performing according to expectations? Sandra McGuire offers a simple but profound answer. If you teach students how to learn and give them simple straightforward strategies to use they can significantly increase their learning and performance. For over a decade Sandra McGuire has been acclaimed for her presentations and workshops on metacognition and student learning because the tools and strategies she shares have enabled faculty to facilitate dramatic improvements in student learning and success. This book encapsulates the model and ideas she has developed in the past fifteen years ideas that are being adopted by an increasing number of faculty with considerable effect. The methods she proposes do not require restructuring courses or an inordinate amount of time to teach. They can often be accomplished in a single session transforming students from memorizers and regurgitators to students who begin to think critically and take responsibility for their own learning. Sandra McGuire takes the reader sequentially through the ideas and strategies that students need to understand and implement. First she demonstrates how introducing students to metacognition and Bloom's Taxonomy reveals to them the importance of understanding how they learn and provides the lens through which they can view learning activities and measure their intellectual growth. Next she presents a specific study system that can quickly empower students to maximize their learning. Then she addresses the importance of dealing with emotion attitudes and motivation by suggesting ways to change students' mindsets about ability and by providing a range of strategies to boost motivation and learning. Finally she offers guidance to faculty on partnering with campus learning centers.

She pays particular attention to academically unprepared students noting that the strategies she offers for this particular population are equally beneficial for all students While stressing that there are many ways to teach effectively and that readers can be flexible in picking and choosing among the strategies she presents Sandra McGuire offers the reader a step by step process for delivering the key messages of the book to students in as little as 50 minutes Free online supplements provide three slide sets and a sample video lecture This book is written primarily for faculty but will be equally useful for TAs tutors and learning center professionals For readers with no background in education or cognitive psychology the book avoids jargon and esoteric theory
