Surgical Neuroangiography:

Surgical Neuroangiography Pierre L. Lasjaunias, A. Berenstein, Alex Berenstein, 1992 In Volume 5 of Surgical Neuroangiography we will discuss indications and approaches for endovascular treatment of disorders affecting the spine and spinal cord circulations Our approach is similar to those discussed in volume 2 and 4 it requires integration of knowledge concerning functional vascular anatomy lesion angioarchitecture and the relationship between normal and pathological circulations In AVMs these features are considered as they relate to the clinical presentation progression and natural history of the lesion All these factors must then be combined with an understanding of technical capabilities to formulate a pretherapeutic plan designed to favorably affect the long term outcome in the individual patient Endovascular surgery of spinal cord AVMs has become the treatment of choice while microsurgery is reserved for those cases where embolization fails Endovascular surgery may be the sole form of treatment or may be combined with other therapeutic modalities including surgery chemotherapy or radiation in cases of neoplasms or may be palliative to decrease pain or spinal cord compression As in all other areas a multidisciplinary approach is essential for decision making to best accomplish the desired objectives
