The Magicians Secret:

Musikexpress-CD. , **The Magician's Secret** Carolyn Keene,2015-01-20 A major magic trick leads to missing murder evidence in this eighth book of the Nancy Drew Diaries a fresh approach to a classic series When she attends a performance by master illusionist Drake Lonestar Nancy is skeptical Lonestar is known for his razzle dazzle wizardry but can the magician really make the River Heights library disappear As it turns out he can but that s not the only thing that goes missing Key evidence to an upcoming murder trial disappears in the midst of the trick And one of the trial attorneys just happens to be Nancy s father Carson Drew assisted by her boyfriend Ned Nickerson Nancy Bess and George are quick to jump on the case but not quite quick enough Lonestar has vanished too and not even his closest friends know his whereabouts Magic is its own kind of mystery but is this one Nancy can handle The Magician's Secret Carolyn Keene,2015-01-20 Includes an excerpt from the next mystery in the series entitled The clue at Black Creek Farm **The Apocryphon of Jannes and Jambres the Magicians** Albert Pietersma,2015-08-25 The focus of this volume is the editio princeps of Papyrus Chester Beatty XVI The Apocryphon of Jannes and Jambres composed in Greek perhaps as early as the first century C E A full commentary accompanies the edited text An introductory section discusses the numerous references to the two magicians who appear in Jewish Christian and Pagan literatures as Moses crafty opponents at the time of Israel s exodus from Egypt Their exploits are recounted in over half a dozen languages from the Syriac east to the Latin west and from Egypt s deserts to King Alfred s court The Apocryphon is placed in its Graeco Roman context but is also discussed as a backdrop for the Faust saga of European literature A basic book for anyone interested in biblical and related literatures **The Psychology of Magic and the Magic of Psychology** Amir Raz,Jay A. Olson,Gustav Kuhn,2016-11-18 Magicians have dazzled audiences for many centuries however few researchers have studied how let alone why most tricks work The psychology of magic is a nascent field of research that examines the underlying mechanisms that conjurers use to achieve enchanting phenomena including sensory illusions misdirection of attention and the appearance of mind control and nuanced persuasion Most studies to date have focused on either the psychological principles involved in watching and performing magic or neuromagic the neural correlates of such phenomena Whereas performers sometimes question the contributions that modern science may offer to the advancement of the magical arts the history of magic reveals that scientific discovery often charts new territories for magicians In this research topic we sketch out the symbiotic relationship between psychological science and the art of magic On the one hand magic can inform psychology with particular benefits for the cognitive social developmental and transcultural components of behavioural science Magicians have a large and robust set of effects that most researchers rarely exploit Incorporating these effects into existing experimental even clinical paradigms paves the road to innovative trajectories in the study of human behaviour For example magic provides an elegant way to study the behaviour of participants who may believe they had made choices that they actually did not make Moreover magic fosters a more

ecological approach to experimentation whereby scientists can probe participants in more natural environments compared to the traditional lab based settings Examining how magicians consistently influence spectators for example can elucidate important aspects in the study of persuasion trust decision making and even processes spanning authorship and agency Magic thus offers a largely underused armamentarium for the behavioural scientist and clinician On the other hand psychological science can advance the art of magic The psychology of deception a relatively understudied field explores the intentional creation of false beliefs and how people often go wrong Understanding how to methodically exploit the tenuous twilight zone of human vulnerabilities perceptual logical emotional and temporal becomes all the more revealing when top down influences including expectation symbolic thinking and framing join the fray Over the years science has permitted magicians to concoct increasingly effective routines and to elicit heightened feelings of wonder from audiences Furthermore on occasion science leads to the creation of novel effects or the refinement of existing ones based on systematic methods For example by simulating a specific card routine using a series of computer stimuli researchers have decomposed the effect and reconstructed it into a more effective routine Other magic effects depend on meaningful psychological knowledge such as which type of information is difficult to retain or what changes capture attention Behavioural scientists measure and study these factors By combining analytical findings with performer intuitions psychological science begets effective magic Whereas science strives on parsimony and independent replication of results magic thrives on reproducing the same effect with multiple methods to obscure parsimony and minimise detection This Research Topic explores the seemingly orthogonal approaches of scientists and magicians by highlighting the crosstalk as well as rapprochement between psychological science and the art of deception
