Computer-Assisted Management and Control of Manufacturing Systems Spyros G. Tzafestas, 2012-12-06 Modern manufacturing systems involve many processes and operations that can be monitored and controlled at several levels of intelligence At the highest level there is a computer that supervises the various manufacturing functions whereas at the lowest level there are stand alone computer controlled systems of manufacturing processes and robotic cells Until recently computer aided manufacturing systems constituted isolated islands of automation each oriented to a particular application but present day systems offer integrated approaches to manufacturing and enterprise operations These modern systems known as computer integrated manufacturing CIM systems can easily meet the current performance and manufacturing competitiveness requirements under strong environmental changes CIM systems are much of a challenge and imply a systemic approach to the design and operation of a manufacturing enterprise Actually a CIM system must take into account in a unified way the following three views the user view the technology view and the enterprise view This means that CIM includes both the engineering and enterprise planning and control activities as well as the information flow activities across all the stages of the system Modeling Manufacturing Systems Paolo Brandimarte, Agostino Villa, 2013-03-09 Advanced modeling techniques are a necessary tool in order to design and manage manufacturing systems effectively This book contains a set of tutorial chapters on topics ranging from aggregate production planning to real time control including

predictive and reactive scheduling flow management in assembly systems simulation of robotic cells design of manufacturing systems under uncertainty and a historical perspective on production management philosophies The book will be of interest both to researchers and practitioners including graduate students in Manufacturing Engineering and Operations Research
