The Macdonald Encyclopedia of Alpine Flowers Guido Moggi, 1947      **The MacDonald Encyclopedia of Alpine Flowers** Gui Moggi, 1995-12-01      Alpine flowers\*The Macdonald encyclopedia of alpine flowers Guido Moggi, 1985      **The European Garden Flora Flowering Plants** James Cullen, Sabina G. Knees, H. Suzanne Cubey, J. M. H. Shaw, 2011-08-11

The European Garden Flora is the definitive manual for the accurate identification of cultivated ornamental flowering plants. Designed to meet the highest scientific standards the vocabulary has nevertheless been kept as uncomplicated as possible so that the work is fully accessible to the informed gardener as well as to the professional botanist. This new edition has been thoroughly reorganised and revised bringing it into line with modern taxonomic knowledge. Although European in name the Flora covers plants cultivated in most areas of the United States and Canada as well as in non tropical parts of Asia and Australasia. Volume 3 contains accounts of 47 families including those formerly included in the Leguminosae Mimosaceae Caesalpiniaceae Fabaceae as well as the large and important Rosaceae. Also included are those families formerly covered by the name Saxifragaceae in the strict sense Penthoraceae Grossulariaceae Parnassiaceae Hydrangeaceae and Escalloniaceae.

**The European Garden Flora** Stuart Max Walters, James Cullen, 1984      **The Gardener's Book of Sources** William Bryant Logan, 1988. This extraordinary compendium provides extensive information and critical comment on the books, periodicals, catalogues, nurseries, societies and services for every aspect of home gardening.

**Alien Plants of the British Isles** E. J. Clement, M. C. Foster, Douglas H. Kent, 1994      **The Plant Geography of Korea** Kong Woo-Seok, Paul Watts, 2012-12-06. This is the first detailed analysis of the complex and rich vegetation of the mountainous Korean peninsula which ranges from arctic alpine to subtropical in character and in which more than 4500 vascular plant species have been recorded including many endemics. It covers both the north and south of the peninsula and using both past and present records identifies eight major biogeographic regions. It pays due attention to vegetation history tracing this back to Miocene times and noting the effects of Pleistocene climatic fluctuations. More recently detailed climatic variations from 50 B.C. are recorded along with man's influence on vegetation patterns. Special mention is made of the present arctic alpine communities, their structural and floristic characteristics, their origins and their vulnerability to current global warming. Throughout the relationships between Korean vegetation communities and those present in adjacent East Asia are emphasized along with those key features which make Korean communities distinctly unique.
