Machines that Learn to Play Games Johannes Fürnkranz,Miroslav Kubat,2001 The mind set that has dominated the history of computer game playing relies on straightforward exploitation of the available computing power The fact that a machine can explore millions of variations sooner than the sluggish human can wink an eye has inspired hopes that the mystery of intelligence can be cracked or at least side stepped by sheer force Decades of the steadily growing strength of computer programs have attested to the soundness of this approach It is clear that deeper understanding can cut the amount of necessary calculations by orders of magnitude The papers collected in this volume describe how to instill learning skills in game playing machines The reader is asked to keep in mind that this is not just about games the possibility that the discussed techniques will be used in control systems and in decision support always looms in the background The Bookseller ,1981 **American Book Publishing Record** ,1990 *Advances in Computer Chess*

The British Library General Catalogue of Printed Books 1976 to 1982 British Library,1983 **American Bookseller** ,1980 The Chess Computer Book T. D. Harding,1982 **Books in Series** ,1985 Vols for 1980 issued in three parts Series Authors and Titles **The British National Bibliography** Arthur James Wells,1968 **Knowledge-based Systems for General Reference Work** John V. Richardson,1995 By focusing on knowledge based systems technology the

primary purpose and goal of this book is to improve the quality of reference service rendered in libraries. Within reference service, this book examines question answering as a complex and difficult task. For those interested in the theoretical aspects of reference work, they have to look no further than the first chapter. In addition, the book features theoretical chapters on modelling the reference transaction, a chapter on the logic of ready reference work, and a chapter on the appropriate criteria to apply in selecting an expert system shell. Several practical chapters focus on what KBS work has already been done in the field and evaluate nearly fifty expert system development shells so that readers can select the most appropriate shell for their domain. The subtitle of the book is 'applications, problems, and progress in regard to expert systems in reference work'. Applications are covered most clearly in chapter 8, which reviews the more than extant prototypes. Chapter 3 covers what is feasible, chapter 4 models the reference transaction, and chapter 7 covers interface issues so that future applications can be more successful. Problems are covered throughout the book, starting with chapter 1, which discusses the traditional emphasis on reference sources. It argues that the field needs to shift toward procedural knowledge related to work in reference departments. The chapter on expert system feasibility reveals that there are alternative ways of conceptualizing the intellectual work of an expert, and of course, chapter 9 directly points out limitations in extant systems. Encouraging words occur in chapter 1 about the shift to a balanced or complete paradigm for doing reference work. Similarly, the chapter on modelling is optimistic in that reference work can be modelled and systems implemented which act like human experts. The final chapter tries to avoid the technological optimism inherent in many books on expert systems by identifying the near-term factors which will influence the development of expert systems. Key Features: Historical background presenting the field's paradigmatic thinking; Decision trees for basic formats of reference material; Flowchart modelling the reference transaction; Reviews of more than fifty extant KBS in general reference environments; Evaluative criteria on more than forty expert system shells.
