LEARN MORE: **MONA AND MYOCARDIAL INFARCTION**

MONA is a mnemonic for the four primary interventions that are performed when treating a patient with Myocardial Infarction (MI). However, MONA does not represent the order and prioritization of administering them. Aside from MONA, TASS is also given which includes thrombolytic drugs are also given within 6 hours of onset to interrupt MI evolution. Anticoagulant therapy reduces the risk of recurrent infarction and death in patients with ST-segment elevation. Stool softeners are used to avoid straining of stool, and sedatives and tranquilizers to increase rest.
