1860 maps did more than communicate geographic information and political pretensions. They became affordable and intelligible to ordinary American men and women looking for their place in the world. School maps quickly entered classrooms where they shaped reading and other cognitive exercises; giant maps drew attention in public spaces; miniature maps helped Americans chart personal experiences. In short, maps were uniquely social objects whose visual and material expressions affected commercial practices and graphic arts, theatrical performances, and the communication of emotions. This lavishly illustrated study follows popular maps from their points of creation to shops and galleries, schoolrooms and coat pockets, parlors and bookbindings. Between the decades leading up to the Revolutionary War and the Civil War, early Americans bonded with maps. Martin Brückner's comprehensive history of quotidian cartographic encounters is the first to show us how.

Mapping America Jean-Pierre Isbouts, Neal Asbury, 2021-06-15. The story of the exploration and birth of America is told afresh through the unique prism of hand-colored maps and engravings of the period. Before photography and television, it was printed and hand-colored maps that brought home the thrill of undiscovered lands and the possibilities of exploration while guiding armies on all sides through the Indian Wars and the clashes of the American Revolution. Only by looking through the prism of these maps can we truly understand how and why America developed the way it did. *Mapping America* illuminates with scene-setting text and more than 150 color images from the exotic and fanciful maps of Renaissance explorers to the magnificent maps of the Golden Age and the thrilling battle maps and charts of the American Revolutionary War, in addition to paintings from the masters of eighteenth-century art, scores of photographs and detailed diagrams. In total, this informative and lushly illustrated volume developed by rare maps collector Neal Asbury, host of Neal Asbury's *Made in America* and National Geographic historian Jean-Pierre Isbouts, offers a new and immersive look at the ambition, the struggle, and the glory that attended and defined the exploration and making of America.

Narrative and Critical History of America: The English and French in North America, 1689-1763. 1887 Justin Winsor, 1887. *The Mapping of America with an index compiled by Douglas Matthews* Ronald Vere Tooley, Douglas Matthews, 1980. Mapping the Nation Susan Schulten, 2012-06-29. A compelling read that reveals how maps became informational tools charting everything from epidemics to slavery. *Journal of American History*. In the nineteenth century, Americans began to use maps in radically new ways. For the first time, medical men mapped diseases to understand and prevent epidemics; natural scientists mapped climate and rainfall to uncover weather patterns; educators mapped the past to foster national loyalty among students; and Northerners mapped slavery to assess the power of the South. After the Civil War, federal agencies embraced statistical and thematic mapping in order to

profile the ethnic racial economic moral and physical attributes of a reunified nation By the end of the century Congress had authorized a national archive of maps an explicit recognition that old maps were not relics to be discarded but unique records of the nation s past All of these experiments involved the realization that maps were not just illustrations of data but visual tools that were uniquely equipped to convey complex ideas and information In Mapping the Nation Susan Schulten charts how maps of epidemic disease slavery census statistics the environment and the past demonstrated the analytical potential of cartography and in the process transformed the very meaning of a map Today statistical and thematic maps are so ubiquitous that we take for granted that data will be arranged cartographically Whether for urban planning public health marketing or political strategy maps have become everyday tools of social organization governance and economics The world we inhabit saturated with maps and graphic information grew out of this sea change in spatial thought and representation in the nineteenth century when Americans learned to see themselves and their nation in new dimensions
